In accordance with pertinent provisions of Republic Act (RA) No. 7722, otherwise known as the Higher Education Act of 1994 and pursuant to Commission en Banc Resolution No. 170 dated April 19, 2009, and for the purpose of rationalizing Nursing Education in the country to provide relevant and quality health services locally and internationally, the following policies and standards for Bachelor of Science in Nursing (BSN) program are hereby adopted and promulgated by the Commission.

ARTICLE I
INTRODUCTION

Section 1. A person is a unique bio-psycho-socio-cultural and spiritual being who is always in constant interaction with the environment. These interactions affect individuals, families, population groups and societal health status.

The nurse assumes the caring role in the promotion and restoration of health, prevention of diseases, alleviation of suffering and, when recovery is not possible, in assisting patients towards a peaceful death. The nurse also collaborates with other members of the health team and other sectors to achieve quality healthcare. Moreover, the nurse works with individuals, families, population groups, communities and society, as a whole, in ensuring active participation in the delivery of holistic healthcare.

Within the context of Philippine society, nursing education, with caring as its foundation, subscribes to the following core values which are vital components in the development of a professional nurse and are therefore emphasized in the BSN program:

1. Love of God
2. Caring as the core of nursing
   a. Compassion
   b. Competence
   c. Confidence
   d. Conscience
e. Commitment (commitment to a culture of excellence, discipline, integrity and professionalism)

1.3 Love of People
   a. Respect for the dignity of each person regardless of creed, color, gender and political affiliation.

1.4 Love of Country
   a. Patriotism (Civic duty, social responsibility and good governance)
   b. Preservation and enrichment of the environment and culture heritage

A strong liberal arts and sciences education with a transdisciplinary approach, enhances this core values. The BSN program therefore, aims to prepare a nurse, who, upon completion of the program, demonstrates beginning professional competencies and shall continue to assume responsibility for professional development and utilizes research findings in the practice of the profession. The following are the Key Areas of Responsibility for which a nurse should demonstrate competence in:

1. Safe and quality nursing care
2. Management of resources and environment
3. Health education
4. Legal responsibility
5. Ethico-moral responsibility
6. Personal and professional development
7. Quality improvement
8. Research
9. Record Management
10. Communication
11. Collaboration and teamwork

ARTICLE II
AUTHORITY TO OPERATE

Section 2. All private higher education institutions (PHEIs) intending to offer the Bachelor of Science in Nursing program must first secure proper authority from the Commission in accordance with existing rules and regulations. State universities and colleges (SUCs) and local colleges and universities (LCUs) should strictly adhere to the provisions of these policies and standards.

The BSN program shall be offered by HEIs with strong liberal arts education, offering at least six (6) baccalaureate programs, preferably in a university-based setting. In the case of colleges and universities with less than six (6) baccalaureate program offerings, a Memorandum of Agreement (MOA) shall be entered between and among higher education institutions with strong liberal arts education [e.g. AB Psychology, BS Biology, AB English, BS Engineering, BS Math, BS Economics] or hire qualified faculty to teach the General Education courses.
ARTICLE III
PROGRAM SPECIFICATIONS

Section 3. Degree Name.

The degree name shall be Bachelor of Science in Nursing (BSN). To ensure the quality of the nursing graduate, the degree is conferred upon completion of at least four-year BSN program offered by a college or university duly recognized by the Commission on Higher Education.

Section 4. Program Description.

The BSN is a four-year program consisting of general education and professional courses. Professional courses begin in the first year and threads through the development of competencies up to the fourth year level. The BSN program provides an intensive nursing practicum that will refine clinical skills from the first year level to ensure basic clinical competencies required of a beginning nurse practitioner.

4.1 Objective: The BSN program aims to produce a fully functioning nurse who is able to perform the competencies under each of the Key Areas of Responsibility as enumerated in Article IV Section 5 herein.

4.2 Specific Careers/Professions/Occupations. Graduates of this program as beginning nurse practitioner may pursue the following career paths but not limited to:

a. Clinical Nursing
b. Community Health Nursing
c. Private-duty Nursing
d. Occupational Health Nursing
e. School Nursing
f. Military Nursing
g. Health Education
h. Research
i. Entrepreneurship

4.3 Allied Programs. The BSN program is allied to the following health related programs:

a. Medicine
b. Dentistry
c. Optometry
d. Physical Therapy/Occupational Therapy
e. Pharmacy
f. Public Health
g. Medical Technology
h. Radiologic Technology
i. Respiratory Therapy
j. Nutrition and Dietetics
**ARTICLE IV**
**COMPETENCY STANDARDS**

**Section 5.** Graduates of Bachelor of Science in Nursing program must be able to apply analytical and critical thinking in the nursing practice. The nurse must be competent in the following Key Areas of Responsibility and its respective core competency standards and indicators:

<table>
<thead>
<tr>
<th>Key Areas of Responsibility</th>
<th>Core Competency</th>
<th>Indicators</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. Safe and Quality Nursing Care</td>
<td>Core Competency 1: Demonstrates knowledge based on the health/illness status of individual/groups</td>
<td>• Identifies the health needs of the clients (individuals, families, population groups and/or communities)</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Explains the health status of the clients/groups</td>
</tr>
<tr>
<td></td>
<td>Core Competency 2: Provides sound decision making in the care of individuals/families/groups considering their beliefs and values</td>
<td>• Identifies wellness potential and/or health problem of clients</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Gathers data related to the health condition</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Analyzes the data gathered</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Selects appropriate action to support/enhance wellness response; manage the health problem</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Monitors the progress of the action taken</td>
</tr>
<tr>
<td></td>
<td>Core Competency 3: Promotes safety and comfort and privacy of clients</td>
<td>• Performs age-specific safety measures in all aspects of client care</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Performs age-specific comfort measures in all aspects of client care</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Performs age-specific measures to ensure privacy in all aspects of client care</td>
</tr>
<tr>
<td></td>
<td>Core Competency 4: Sets priorities in nursing care based on clients’ needs</td>
<td>• Identifies the priority needs of clients</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Analyzes the needs of clients</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Determines appropriate nursing care to address priority needs/problems</td>
</tr>
<tr>
<td></td>
<td>Core Competency 5: Ensures continuity of care</td>
<td>• Refers identified problem to appropriate individuals/ agencies</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Establishes means of providing continuous client care</td>
</tr>
<tr>
<td></td>
<td>Core Competency 6: Administers medications and other health therapeutics</td>
<td>• Conforms to the 10 golden rules in medication administration and health therapeutics</td>
</tr>
</tbody>
</table>
Core Competency 7: Utilizes the nursing process as framework for nursing

### 7.1 Performs comprehensive and systematic nursing assessment
- Obtains informed consent
- Completes appropriate assessment forms
- Performs appropriate assessment techniques
- Obtains comprehensive client information
- Maintains privacy and confidentiality
- Identifies health needs

### 7.2 Formulates a plan of care in collaboration with clients and other members of the health team
- Includes client and family in care planning
- Collaborates with other members of the health team
- States expected outcomes of nursing intervention maximizing clients’ competencies
- Develops comprehensive client care plan maximizing opportunities for prevention of problems and/or enhancing wellness response
- Accomplishes client-centered discharge plan

### 7.3 Implements planned nursing care to achieve identified outcomes
- Explains interventions to client and family before carrying them out to achieve identified outcomes
- Implements nursing intervention that is safe and comfortable
- Acts to improve clients’ health condition or human response
- Performs nursing activities effectively and in a timely manner
- Uses the participatory approach to enhance client-partners empowering potential for healthy lifestyle/wellness

### 7.4 Evaluates progress toward expected outcomes
- Monitors effectiveness of nursing interventions
- Revises care plan based on expected outcomes

B. Management of Resources and Environment

Core Competency 1: Organizes work load to facilitate client care
- Identifies tasks or activities that need to be accomplished
- Plans the performance of tasks or activities based on priorities
- Verifies the competencies of the staff prior to delegating tasks
- Determines tasks and procedures that can be safely assigned to other members of the team
- Finishes work assignment on time
<table>
<thead>
<tr>
<th>Core Competency 2:</th>
<th>Utilizes financial resources to support client care</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Identifies the cost-effectiveness in the utilization of resources</td>
</tr>
<tr>
<td></td>
<td>• Develops budget considering existing resources for nursing care</td>
</tr>
<tr>
<td>Core Competency 3:</td>
<td>Establishes mechanism to ensure proper functioning of equipment</td>
</tr>
<tr>
<td></td>
<td>• Plans for preventive maintenance program</td>
</tr>
<tr>
<td></td>
<td>• Checks proper functioning of equipment considering the:</td>
</tr>
<tr>
<td></td>
<td>- intended use</td>
</tr>
<tr>
<td></td>
<td>- cost-benefit</td>
</tr>
<tr>
<td></td>
<td>- infection control</td>
</tr>
<tr>
<td></td>
<td>- safety</td>
</tr>
<tr>
<td></td>
<td>- waste creation and disposal storage</td>
</tr>
<tr>
<td></td>
<td>• Refers malfunctioning equipment to appropriate unit</td>
</tr>
</tbody>
</table>

**From Competency 5**

<table>
<thead>
<tr>
<th>Core Competency 4:</th>
<th>Maintains a safe environment</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Complies with standards and safety codes prescribed by law</td>
</tr>
<tr>
<td></td>
<td>• Adheres to policies, procedures and protocols on prevention and control of infection</td>
</tr>
<tr>
<td></td>
<td>• Observes protocols on pollution-control (water, air and noise)</td>
</tr>
<tr>
<td></td>
<td>• Observes proper disposal of wastes</td>
</tr>
<tr>
<td></td>
<td>• Defines steps to follow in case of fire, earthquake and other emergency situations.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>C. Health Education</th>
<th>Core Competency 1:</th>
<th>Assesses the learning needs of the clients/partner/s</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>• Obtains learning information through interview, observation and validation</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Analyzes relevant information</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Completes assessment records appropriately</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Identifies priority needs</td>
</tr>
<tr>
<td>Core Competency 2:</td>
<td>Develops health education plan based on assessed and anticipated needs</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Considers nature of learner in relation to: social, cultural, political, economic, educational and religious factors.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Involves the client, family, significant others and other resources in identifying learning needs on behavior change for wellness, healthy lifestyle or management of health problems</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Formulates a comprehensive health education plan with the following components: objectives, content, time allotment, teaching-learning resources and evaluation parameters</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Provides for feedback to finalize the plan</td>
<td></td>
</tr>
<tr>
<td>Core Competency 3:</td>
<td>Develops learning materials for health education</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Develops information education materials appropriate to the level of the client</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Applies health education principles in the development of information education materials</td>
<td></td>
</tr>
</tbody>
</table>
| Core Competency 4: Implements the health education plan | • Provides for a conducive learning situation in terms of time and place  
• Considers client and family’s preparedness  
• Utilizes appropriate strategies that maximize opportunities for behavior change for wellness/healthy lifestyle  
• Provides reassuring presence through active listening, touch, facial expression and gestures  
• Monitors client and family’s responses to health education |
| Core Competency 5: Evaluates the outcome of health education | • Utilizes evaluation parameters  
• Documents outcome of care  
• Revises health education plan based on client response/outcome/s |
| **D. Legal Responsibility** | **Core Competency 1:** Adheres to practices in accordance with the nursing law and other relevant legislation including contracts, informed consent.  
• Fulfills legal requirements in nursing practice  
• Holds current professional license  
• Acts in accordance with the terms of contract of employment and other rules and regulations  
• Complies with required continuing professional education  
• Confirms information given by the doctor for informed consent  
• Secures waiver of responsibility for refusal to undergo treatment or procedure  
• Checks the completeness of informed consent and other legal forms |
| **Core Competency 2:** Adheres to organizational policies and procedures, local and national | • Articulates the vision, mission of the institution where one belongs  
• Acts in accordance with the established norms of conduct of the institution / organization/legal and regulatory requirements |
| **Core Competency 3:** Documents care rendered to clients | • Utilizes appropriate client care records and reports.  
• Accomplishes accurate documentation in all matters concerning client care in accordance to the standards of nursing practice. |
| **E. Ethico-moral Responsibility** | **Core Competency 1:** Respects the rights of individual / groups  
• Renders nursing care consistent with the client’s bill of rights: (i.e. confidentiality of information, privacy, etc.) |
| **Core Competency 2:** Accepts responsibility and accountability for own decision and | • Meets nursing accountability requirements as embodied in the job description  
• Justifies basis for nursing actions and decisions |
| Core Competency 3: Adheres to the national and international codes of ethics for nurses | Adheres to the Code of Ethics for Nurses and abides by its provisions  
Reports unethical and immoral incidents to proper authorities |
|---|---|
| F. Personal and Professional Development | Core Competency 1: Identifies own learning needs | Identifies one’s strengths, weaknesses and limitations  
Determines personal and professional goals and aspirations |
| Core Competency 2: Pursues continuing education | Participates in formal and non-formal education  
Applies learned information for the improvement of care |
| Core Competency 3: Gets involved in professional organizations and civic activities | Participates actively in professional, social, civic, and religious activities  
Maintains membership to professional organizations  
Support activities related to nursing and health issues |
| Core Competency 4: Projects a professional image of the nurse | Demonstrates good manners and right conduct at all times  
Dresses appropriately  
Demonstrates congruence of words and actions  
Behaves appropriately at all times |
| Core Competency 5: Possesses positive attitude towards change and criticism | Listens to suggestions and recommendations  
Tries new strategies or approaches  
Adapts to changes willingly |
| Core Competency 6: Performs functions according to professional standards | Assesses own performance against standards of practice  
Sets attainable objectives to enhance nursing knowledge and skills  
Explains current nursing practices, as the situation arises |
| G. Quality Improvement | Core Competency 1: Gathers data for quality improvement | Identifies appropriate quality improvement methodologies for clinical problems  
Detects variations in specific parameters i.e vital signs of the client from day to day  
Reports significant changes in clients’ condition/environment to improve stay in the hospital  
Solicits feedback from clients and significant others regarding care rendered |
| Core Competency 1: Gathers data using different methodologies | • Specifies researchable problems regarding client care and community health  
• Identifies appropriate methods of research for a particular client / community problem  
• Combines quantitative and qualitative nursing design through simple explanation on the phenomena observed |
| Core Competency 2: Analyzes and interprets data gathered | • Analyzes data gathered using appropriate statistical tool  
• Interprets data gathered based on significant findings |
| Core Competency 3: Recommends actions for implementation | • Recommends practical solutions appropriate to the problem based on the interpretation of significant findings |
| Core Competency 4: Disseminates results of research findings | • Shares/presents results of findings with colleagues / clients/ family and to others  
• Endeavors to publish research  
• Submits research findings to own agency and others as appropriate |
| Core Competency 5: Applies research findings in nursing practice | • Utilizes findings in research in the provision of nursing care for individuals / groups / communities  
• Makes use of evidence-based nursing to enhance nursing practice |
| I. Records Management Core Competency 1: Maintains accurate and updated | • Completes updated documentation of client care |
| documentation of client care | • Applies principles of record management  
• Monitors and improves accuracy, completeness and reliability of relevant data  
• Makes record readily accessible to facilitate client care |
| --- | --- |
| Core Competency 2: Records outcome of client care | • Utilizes records system ex. Kardex or Hospital Information System (HIS)  
• Uses data in decision and policy making activities |
| Core Competency 3: Observes legal imperatives in record keeping | • Maintains integrity, safety, access and security of records  
• Documents/monitors proper record storage, retention and disposal  
• Observes confidentially and privacy of the clients’ records  
• Maintains an organized system of filing and keeping clients’ records in a designated area  
• Follows protocol in releasing records and other information |
| Core Competency 1: Establishes rapport with clients, significant others and members of the health team | • Creates trust and confidence  
• Spends time with the client/significant others and members of the health team to facilitate interaction  
• Listens actively to client’s concerns/significant others and members of the health team |
| Core Competency 2: Identifies verbal and non-verbal cues | • Interprets and validates client’s body language and facial expressions |
| Core Competency 3: Utilizes formal and informal channels | • Makes use of available visual aids  
• Utilizes effective channels of communication relevant to client care management |
| Core Competency 4: Responds to needs of individuals, families, groups and communities | • Provides reassurance through therapeutic touch, warmth and comforting words of encouragement  
• Provides therapeutic bio-behavioral interventions to meet the needs of clients |
| Core Competency 5: Uses appropriate information technology to facilitate communication | • Utilizes telephone, mobile phone, electronic media  
• Utilizes informatics to support the delivery of healthcare |

J. Communication
### Core Competency 1: Collaboration and Teamwork

- Establishes collaborative relationships with colleagues and other members of the health team
- Contributes to decision making regarding clients’ needs and concerns
- Participates actively in client care management including audit
- Recommends appropriate interventions to improve client care
- Respects the role of other members of the health team
- Maintains good interpersonal relationships with clients, colleagues and other members of the health team

### Core Competency 2: Collaboration and Teamwork

- Collaborates plan of care with other members of the health team
- Refers clients to allied health team partners
- Acts as liaison / advocate of the client
- Prepares accurate documentation for efficient communication of services

### ARTICLE V

**CURRICULUM**

**Section 6. Curriculum.** Higher education institutions offering the Bachelor of Science in Nursing program must conform to the standard curriculum embodied in this CMO, provided that program innovations shall be subject to prior review by the Commission.

**Section 7. Level Objectives.** The student shall be given opportunities to be exposed to the various levels of health care (health promotion, disease prevention, risk reduction, curative and restoration of health) with various client groups (individual, family, population groups and community) in various settings (hospital, community). These opportunities shall be given in graduated experiences to ensure that the competencies per course, per level and for the whole program are developed.

Before graduation, the student shall approximate the competencies of a professional nurse as they assume the various roles and responsibilities. For each year level, the following objectives should be achieved:

7.1 At the end of the first year, the students shall have acquired an understanding and awareness of themselves as an individual and as a member of the family, the community, and the world with emphasis on personal, societal and professional values responsibilities, rights, and an awareness of physical, social and cultural milieu.

The student shall have an awareness of the competency-based approach in the curriculum and the core competencies under the 11 key areas of responsibility: safe and quality nursing care, communication, collaboration and teamwork, health education, legal responsibility, ethico-moral responsibility, personal and professional development, quality improvement, research, management of resources and environment, and record management.
Specifically, the student shall:

a. develop a deeper understanding of himself/herself and the multi-factorial dimensions of the individual which can affect health and well being;
b. recognize his/her duty in improving the quality of life not only for himself/herself but for others as well;
c. develop a deeper awareness of his/her rights, duties and responsibilities to God, country and the world;
d. demonstrate beginning skills in the use of the nursing process in caring for healthy individuals;
e. explain the theoretical foundation of nursing with the four meta-paradigms as guide to his/her nursing practice;
f. apply the scientific method to his activities wherever possible;
g. imbibe the values cherished by the nursing profession such as teamwork, respect, love of God, integrity and caring;
h. discuss the competency based BSN program and the core competencies under the 11 key areas of responsibility; and
i. demonstrate critical thinking skills in relating with self and others.

7.2 At the end of the second year, the student shall have acquired the holistic understanding of the human person as a bio-psycho-cultural being focusing on the concept of health and illness as it is related to the care of the mother and child in varied settings. The student shall be able to demonstrate the competencies in the following key areas of responsibility such as safe and quality nursing care, communication, collaboration and teamwork, health education, legal responsibility, ethico-moral responsibility, personal and professional development, quality improvement, research, management of resources and environment, and records management.

Specifically, the student shall:

a. describe the health care delivery system and the role of the nurse in it;
b. demonstrate ethico-moral, legal responsibilities in the care of individual family and community;
c. demonstrate the beginning skills in the provision of independent and collaborative nursing functions;
d. relate the stages of growth and development in the care of clients;
e. demonstrate beginning skills in the preparation of healthy and therapeutic diets in varied client cases;
f. explain the dynamics of the disease process caused by microbes and parasites and the environment;
g. imbibe the core values cherished by the nursing profession such as love of God, country and people, and caring;
h. design a plan that will focus on health promotion and risk reduction to clients; and
i. utilize the nursing process in the care of the high risk mother and child in the family.
7.3 At the end of the third year, given actual clients/situations with various physiologic and psychosocial alterations, the student shall be able to demonstrate the competencies in the following key areas of responsibility such as safe and quality nursing care, communication, collaboration and teamwork, health education, legal responsibility, ethico-moral responsibility, personal and professional development, quality improvement, research, management of resources and environment, and records management.

Specifically the student shall:

a. utilize the nursing process in caring for clients across the lifespan with problems in oxygenation, fluid and electrolyte balance, metabolism and endocrine functioning, inflammatory and immunologic reactions, perception coordination and maladaptive patterns of behavior;
b. apply the research process in addressing nursing/health problems to improve quality of care;
c. integrate the role of culture and history in the plan of care;
d. apply principles of good governance in the effective delivery of quality health care;
e. observe the core values cherished by the nursing profession such as love of God, country and people, and caring and the bioethical principles in the care of clients;
f. apply a nursing theory in the management of care of a client for case study; and,
g. discuss the roles of economics as it impacts on health and illness;

7.4 At the end of the 4th year, given actual clients/situations the student shall be able to demonstrate competencies in all the key areas of responsibility such as safe and quality nursing care, communication, collaboration and teamwork, health education, legal responsibility, ethico-moral responsibility, personal and professional development, quality improvement, research, management of resources and environment, and records management.

Specifically, the student shall:

a. utilize the nursing care process in caring for clients across the lifespan with problems in cellular aberrations and acute biologic crisis, disaster/emergency situations;
b. apply a nursing theory in the management of care of a client for case study;
c. observe the core values cherished by the nursing profession such as love of God, country, people and caring, and the bioethical principles and legal dimensions in the care of clients; and,
d. demonstrate leadership and management skills in the care of a group of clients in the community and hospital setting utilizing research findings.
## Section 8. Curriculum Outline

### A. Outline of Total Units of General Education (GE) Courses: 87 Units

SL - Skills Laboratory  
C - Clinicals
ARTICLE VI
OTHER REQUIREMENTS

Section 10. Program Administration:

10.1 The College shall be administered by a full-time dean with the following qualifications:

a. Filipino citizen;
b. Registered Nurse in the Philippines with current and valid PRC ID;
c. Holder of Master’s degree in Nursing (MAN, MN, MSN) conferred by a college or university duly recognized by the Commission on Higher Education;
d. Has at least one (1) year experience of clinical practice and a total of at least five (5) years experience in teaching, administration and supervision of nursing education;
e. Physically and mentally fit;
f. Of good moral character;
g. Has no other teaching assignments or administrative functions in other public/private institutions or higher education institutions;
h. Member of accredited professional nursing organization of good standing;
i. Upon appointment, he/she must be an active member of good standing of the Association of Deans of Philippine College of Nursing (ADPCN); and,
j. Upon appointment, he/she should have a duly notarized employment contract of at least one (1) academic year renewable annually. The contract should specify the academic rank.

10.2 The Dean shall have the following functions and responsibilities:

a. Prepares short term and long term plans;
b. Initiates curriculum development programs;
c. Plans a rational faculty, academic and non-academic load;
d. Leads in the faculty and staff development programs;
e. Manages human, financial and physical resources;
f. Manages student development programs;
g. Manages department/college office operations;
h. Leads development and utilization of instructional resource materials;
i. Pursues personal and professional development;
j. Collaborates with the health services, affiliation agencies and other academic units in the implementation of instructional programs;
k. Monitors proper implementation of the programs;
l. Initiates research and community extension projects/programs;
m. Establishes internal and external linkages;
n. Obtains recognition/accreditation of the nursing program; and
o. Evaluates the performance results of the nursing program.
10.3 The Dean shall have a teaching load not exceeding a total of six (6) units of lecture in a semester.

Section 11. Faculty Qualifications/Requirements:

11.1 The faculty shall have academic preparation appropriate to his/her teaching assignment. In addition to being a Filipino citizen and having good moral character, the following qualifications must be observed:

For faculty members teaching professional courses:

   a. Registered Nurse in the Philippines with current/valid PRC ID
   b. Holder of Master’s degree in Nursing (MAN, MN, MSN), Education or other allied medical and health sciences conferred by a college or university duly recognized by the Commission on Higher Education;
   c. At least one (1) year of clinical practice
   d. A member of accredited professional nursing organization of good standing

For faculty members teaching other courses:

   e. At least a master’s degree holder of other allied medical and health sciences as specified under Section 4.3 of this CMO for those teaching health science courses;
   f. At least a master’s degree holder in their area of specialization for faculty members teaching general education courses and should only teach courses in their area of specialization;

11.2 When vacancies occur in the teaching force of the college during the school year, substitute or replacement with similar or higher qualifications shall be employed.

11.3 The following conditions for employment must be observed:

   a. The salary of faculty shall be commensurate to his/her academic rank.
   b. Full time faculty member who teaches professional courses shall be responsible for both classroom and Related Learning Experiences (RLEs).

11.4 Upon appointment, a faculty member should have a duly notarized employment contract of at least one (1) academic year, renewable annually specifying academic rank in accordance with his academic training and clinical expertise. The recognized ranks are: instructor, assistant professor, associate professor and professor.

11.5 For the initial operation of the BSN program with two (2) sections of not more than 50 students per section, a minimum of four (4) qualified faculty members teaching professional and health science courses, two (2) of whom must be at least holders of a master’s degree in nursing, shall be employed.
11.6 The College of Nursing shall have an updated five-year faculty development program (FDP). The FDP consists of written activities and programs toward the development of the faculty for intellectual, personal, and professional as well as moral and spiritual growth. The program may be in the form of:

a. graduate studies
b. scholarship and research grants
c. in-service and continuing training programs
d. clinical skills enhancement on official basis for at least two weeks per year

11.7 Teaching Load. The teaching load of faculty members should be as follows:

a. Full-time faculty members may carry a combined RLE and teaching load of not more than thirty-six (36) units per semester which include consultation hours and other activities related to RLE instruction, research and extension services. One hour of RLE supervision is equivalent to one (1) unit credit.

b. Nurses who are employed in government and private institutions and at the same time who serve as part time faculty or clinical instructors must secure permit from the employer/s to be given a maximum teaching load of nine (9) units, provided they will render services after office hours. Moreover, the Chief Nurse/Training Coordinator/Supervisor/Head Nurse should not assume any administrative and clinical supervisory function in any nursing school.

11.8 The college of nursing must have a faculty manual containing information and policies on all matters pertaining to the faculty.

11.9 There must be a faculty clinical orientation on policies, standards, guidelines and expectations on the course of affiliating agencies. Likewise, nurses from affiliating agencies employed as preceptors or clinical instructors must be oriented on the BSN Curriculum and the expectations on the course.

Section 12. Library

12.1 Policy. Library services shall provide the instructional and research needs of the staff and students making it one of the most important service units within a higher education institution. It is for this reason that libraries should be given special attention by the administrators of the institution. Libraries should be maintained it with a wide and up-to-date collection, qualified staff, communications and connectivity portals.

12.2 Library Staff. The Head librarian should be:

a) A registered librarian;
b) Masters’ degree holder in Library Science; and,
c) Posses appropriate professional training.
The library should be staffed with one full time registered librarian for every 1,000 students and a ratio of 1 librarian to 2 staff/clerks.

12.3. Library Holdings. Library holdings should conform to existing requirements for libraries. There should be five (5) book titles per professional subject found in the curriculum at a ratio of one (1) volume per fifteen (15) students enrolled in the program. Book titles must be of recent edition, published within the last five (5) years. The Higher education institutions [HEI] are encouraged to maintain periodicals and other non-print materials relevant to the nursing program to aid the faculty and students in their academic works. CD-ROMs may complement a library’s book collection but should not be considered a replacement for the same.

a. Opening of new BSN program shall have at least 3,000 total number of books accessioned, 30% of which shall consist of professional books. Ten percent (10%) of the total professional book collection shall be of Filipiniana collection.

b. The library collection during the recognition of the BS Nursing program shall double the book collection specified in 12.3.a.

12.4. Journals. For the opening of new BS nursing program, the HEI shall have a regular and updated subscription to at least seven (7) professional foreign nursing journals and at least two (2) local journals in the following areas:

a. Maternal and Child Nursing
b. General Nursing
c. Nursing Research
d. Psychiatric Nursing
e. Nursing Management/Leadership
f. Pediatric Nursing
g. Medical-Surgical Nursing

For the recognition of the BS nursing program, the subscription of foreign nursing journals should be regularly updated and maintained. The number of copies of these journals shall be increased depending upon the student population.

In addition to the core book collection, a core periodical collection of current and relevant titles (local and foreign) shall also be provided. Periodicals shall include serials, magazines and newspapers. A minimum of five (5) titles are required. The recommended number of periodicals based on enrollment is as follows:

<table>
<thead>
<tr>
<th>Enrollment</th>
<th>No. of copies of Periodicals</th>
</tr>
</thead>
<tbody>
<tr>
<td>For every 250 students</td>
<td>5 copies per title</td>
</tr>
</tbody>
</table>
12.5. Regular weeding out program shall be undertaken to keep the collections relevant and up-to-date within the last five (5) years. Archived collections shall not be more than 30% of the total collections.

12.6. Stamping of Library Collections. For purposes of identification, the library collection including general education books, professional books, reference materials, journals and similar other collections shall be stamped with the name of college/university and the campus where the institution is located.

12.7. Internet Access. Internet access is encouraged but should not be made a substitute for book holdings.

12.8. Space Requirements. The following are the minimum requirements for the library:
   a. At least 126 square meters or approximately two (2) classrooms shall be required for the library.
   b. At any one time, a library space should accommodate at least five per cent (5%) of the total enrollment.
   c. It should include space for collections, shelving areas, stockroom, reading area and office space or lounge for staff. The facilities shall be designed to attract and provide safety and promote operational efficiency and effectiveness of use. In addition, provision for future expansion should be made.

12.9. Finance. All library fees should be used exclusively for library operations and procurement for collections, furniture and fixtures, equipment and facilities, maintenance and staff development.

12.10. Networking. School libraries shall participate in inter-institutional activities and cooperative programs whereby resource sharing is encouraged.

12.11. Accessibility. The library should be accessible to all and should be open to serve the needs of users even beyond class hours. Users include members of the faculty, students and employees of the institution.

Section 13. Facilities and Equipment

13.1. Laboratory Requirements:

Laboratories should conform to existing requirements as specified in RA 6541, “The National Building Code of the Philippines” and Presidential Decree 856, “Code of Sanitation of the Philippines.” List of required and recommended equipment are listed in each course requirement.

A system for identification of laboratory equipment, supplies and models should be observed.
13.2. Classroom Requirements:

a. For regular lecture class, the class size shall have a maximum of 50 students.
b. For science laboratory class, the class size shall have a maximum of 25 students
c. For special lectures, a class size of more than 45 students may be allowed as long as the required facilities are provided.

The classroom area shall have at least 7 meters x 9 meters or 63 square meters.

13.3. Nursing Skills Laboratory:

The nursing skills laboratory must be well-lighted and well-ventilated. Its demonstration room and practice area for return demonstration must have an area of at least 8m. x 14m. or 112 sq.m. The nursing skills laboratory simulates major areas in hospital setting and equipped with basic instruments, equipment and supplies, to aid in the development of the competencies in performing nursing procedures. Specifically, the nursing skills laboratory shall have:

a. An amphitheater-style demonstration room that can accommodate a maximum of 50 students at one time with lavatory and running water;

b. Ratio of bed to practicing students is 1:2 or a practice area for return demonstration where there is one (1) bed to two (2) students at any given time;

c. At least two (2) doors which will serve as an entrance and exit;

d. At least one (1) fire extinguisher placed outside the door in each science laboratory/nursing skills laboratory. The fire extinguisher must have a record of refill and expiry date attached to the unit;

e. Basic demonstration models namely:

1. Birthing model
2. Newborn Model
3. Adult bisexual model with the following contraptions for:
   3.1 basic life support
   3.2. tracheostomy care
   3.2. colostomy care
   3.3 catheterization
   3.4 enema
   3.5. parenteral/intravenous (IV)

g. Equipment
   1. Electrocardiogram (ECG) monitoring demonstration
   2. Suction apparatus

h. Ratio of demonstration models to practicing students is 1:10, to facilitate learning.
13.4. Clinical Facilities and Resources:

Related Learning Experiences (RLEs) are teaching-learning opportunities designed to develop the competencies of students utilizing processes in various health situations. These could be sourced from, but not limited to: lying-in clinics, schools, industrial establishments, community, out-patient clinics and general and specialty hospitals.

Base Hospital. The base hospital is a health facility utilized by a higher education institution with nursing program offering as a source of basic or primary related learning experiences. The hospital maybe independent or owned or operated by the institution or utilized by the institution in accordance with an effective and duly notarized Memorandum of Agreement between the institution and the base hospital which clearly specifies the responsibilities of each party.

The base hospital of a nursing school should meet the following requirements:

a. Has current accreditation by the DOH-Bureau of Licensing and Regulation as Level IV Hospital (Tertiary Care/Teaching/Training Hospital). However, Level III Hospitals (Secondary Care Hospitals) may be considered provided that the hospital can provide the following:

   a.1 adequate case load for the number of students enrolled as stipulated in Article VII, Section 15-e. 9.

   a.2 adequate facilities for the teaching and learning needs of the students.

b. Has minimum capacity of 100 beds with general services and minimum bed occupancy of eighty percent (80%);

c. Should be accessible and located within the region where the nursing school is situated. In the case of nursing schools located in Metro Manila, the base hospital should be located within Metro Manila.

d. Sixty per cent (60%) of the total bed capacity of the base hospital shall be used for the RLEs of students.

e. Should have a master rotation plan indicating the schedule/areas of all the schools utilizing the hospital for training of students.

Affiliation Hospital is a health facility being utilized by the higher education institution in specialized areas for supplementary clinical learning of students such as mental, orthopedics and communicable diseases. A Contract of Affiliation shall be used as a legal document to show the terms of references among involved parties. Parties to the contract of affiliation should provide and maintain an
environment conducive for the attainment of the teaching-learning objectives. The nursing school and the hospital agency should establish effective coordination and cooperation. Open communication should exist among the medical staff and the school personnel.

Cross regional affiliations will not be allowed unless in cases where specialty areas cannot be found in the region.

The base hospital/s, affiliation hospital/s and community health agency/ies being used by the students for RLEs either conducted in urban or rural community should have the following facilities:

a. classroom for conference
b. library
c. comfort room
d. dressing room
e. lounge
f. locker

Provision should be made for adequate physical facilities, supplies and equipment for effective nursing care and learning experiences of students.

The nursing service should be provided with a designated training coordinator and the required staffing composed of qualified professional and non-professional personnel.

The faculty and the nursing service personnel of the affiliation agency should work together in the planning, implementation and evaluation of the related learning experiences of students.

There should be an adequate number of patients varying in age, sex, level/acuity and types of illness desired for teaching-learning experience of different curricular levels.

13.5. Virtual Nursing Skills Laboratory:

Higher education institutions are encouraged to put up Virtual Skills Laboratory to supplement and complement the related learning experiences prior to actual experience.
(safe and quality nursing care, health education, communication, collaboration & teamwork, legal responsibility, ethico-moral responsibility, personal & professional development, research, quality improvement, records management and management of resources and environment) that contribute to quality nursing education. The following should be strictly observed:

a. Professional nursing subjects should be offered with the corresponding RLEs taking into consideration the pre-requisites, sequencing, continuity and integration requirements.

b. Credit for the completion of the course shall be based on the fulfillment of curricular requirements. The grades on professional courses shall be based on the course credit (i.e. lecture units and RLE units).

c. The ratio of faculty to student in science laboratory class is 1:25 while regular classroom is 1:50. The institution shall provide for a systematic and continuing plan of evaluation of the student’s progress through a marking system that is consistent and congruent with set objectives.

d. A system of academic evaluation shall be instituted and implemented for monitoring and evaluating students and teacher performance.

e. There shall be a regular academic audit on instructional resources such as syllabi, textbooks, modules, audiovisual materials and others such as software.

f. Academic records of faculty members must be properly kept and maintained in the college of nursing.

g. The competency standards for nursing practice in the Philippines must be an integral part of the nursing education process, therefore, the Philippine Nursing Core Standards shall serve as the framework for the development of instructional standards of the BS Nursing curriculum as provided by the PRC-BoN Resolution No.112 s. 2005 and future amendments consistent thereto; as well as PRC-BoN Memorandum No. 01 s. 2009 dated April 14, 2009 entitled, “Policy Guidelines on Intrapartal, Immediate Care of the Newborn and Intra-operative Care”.

Section 15. The teaching-learning process is composed of the theoretical/didactic and experiential/RLE. The Related Learning Experience (RLE) is composed of Clinicals and Skills Laboratory. The RLE activities are carefully selected to develop competencies utilizing the nursing process in varying health situations. The following conditions must be observed:

a. Related Learning Experience (clinicals) shall be offered simultaneously or immediately after the lecture. Classroom and RLE activities must be congruent with the objectives of the course.

b. Faculty teaching the lecture shall supervise students in their RLE. In the case of team teaching, there should be close coordination and collaboration between the lecturer and the clinical faculty.
c. A documented RLE rotation plan showing distribution of students and faculty supervision in each clinical area of base hospital and affiliation agencies shall be made available.

d. Faculty compensation shall be based on the computation that one (1) hour RLE is equivalent to one (1) lecture hour.

e. Effectiveness and efficiency of the Related Learning Experience, shall consider the following factors:

   e.1 Quality of supervision of clinical instructors and teaching-learning process
   e.2 Readiness and capability of the learner
   e.3 Quality of the learning resources both in institutions and communities
   e.4 Adequate number and variety of clientele
   e.5 Utilization of appropriate feedback mechanism
   e.6 Adequate number of qualified nursing staff and other personnel
   e.7 Quality of nursing care services
   e.8 Compliance with the required equivalence of fifty one (51) hours to one (1) unit RLE
   e.9 Ratio of student to clientele depends upon the objectives and the capacity of the student.

The ratio of student to clientele shall be:

<table>
<thead>
<tr>
<th>Level</th>
<th>1st Semester</th>
<th>2nd Semester</th>
</tr>
</thead>
<tbody>
<tr>
<td>I</td>
<td>NA</td>
<td>1:1</td>
</tr>
<tr>
<td>II</td>
<td>1:1</td>
<td>1:2</td>
</tr>
<tr>
<td>III</td>
<td>1:2-3</td>
<td>1:3-4</td>
</tr>
<tr>
<td>IV</td>
<td>1:5</td>
<td>1:6</td>
</tr>
</tbody>
</table>

The ratio depends upon the client group, e.g, ICU 1:1-2; Psych 1:1; Community-based experience 1:1 Family; 1:1 Population Group per catchment area; 1-2:1 Community (depending on the size of the barangay).

The ratio of faculty to student for RLE (Skills Laboratory) shall be:

<table>
<thead>
<tr>
<th>Level</th>
<th>1st Semester</th>
<th>2nd Semester</th>
<th>Summer</th>
</tr>
</thead>
<tbody>
<tr>
<td>I</td>
<td>NA</td>
<td>1:8-10</td>
<td>1:8-10</td>
</tr>
<tr>
<td>II</td>
<td>1:8-10</td>
<td>1:8-10</td>
<td>NA</td>
</tr>
<tr>
<td>III</td>
<td>1:10-12</td>
<td>1:10-12</td>
<td>NA</td>
</tr>
<tr>
<td>IV</td>
<td>1:12-15</td>
<td>1:12-15</td>
<td>NA</td>
</tr>
</tbody>
</table>
The ratio of faculty to student for RLE (Clinicals in Hospital/Community setting) shall be:

<table>
<thead>
<tr>
<th>Level</th>
<th>1&lt;sup&gt;st&lt;/sup&gt; Semester</th>
<th>2&lt;sup&gt;nd&lt;/sup&gt; Semester</th>
</tr>
</thead>
<tbody>
<tr>
<td>I</td>
<td>NA</td>
<td>NA</td>
</tr>
<tr>
<td>II</td>
<td>1:8-10</td>
<td>1:8-10</td>
</tr>
<tr>
<td>III</td>
<td>1:10-12</td>
<td>1:10-12</td>
</tr>
<tr>
<td>IV</td>
<td>1:12-15</td>
<td>1:12-15</td>
</tr>
</tbody>
</table>

Section 16. Recognition and Accreditation

a. For government recognition, an increase in student population shall be subject to proportionate increase in resources both in classroom and clinical area, subject to CHED approval. For this purpose, CHED Regional Offices shall strictly monitor compliance herein.

b. Nursing schools that are in existence for a period of five (5) years are encouraged to undergo program accreditation.

ARTICLE VIII
RESEARCH REQUIREMENTS

The administration shall encourage and support research among its students and faculty and promote utilization of research findings to guide and improve nursing practice, educational management and other aspects of the nursing program.

All students shall complete a research project during the course of study.

Faculty research outputs and publications shall be considered in faculty promotions and academic ranking. Strict adherence to ethics in research must be observed.

There shall be an adequate budget allocated for research and publication. A functional research committee or office should support research and publication activities.

ARTICLE IX
ADMISSION, SELECTION AND RETENTION OF STUDENTS

The school shall have a well-defined admission, selection, promotion and retention policy published and made known to students and reflected in the Student Handbook. In addition, the college shall administer entrance examination to incoming freshmen students covering the following areas:

a. English
b. Science
c. Mathematics
d. Inductive Reasoning
The number of students admitted to the College of Nursing shall be based on the following:

a. qualified faculty
b. teaching/learning resources
c. resources of the base hospital/affiliation agencies based on:
   - clientele
   - staffing
   - facilities/services
   - number of student affiliates

Records and evidences of actual implementation of these policies must be made available.

A student is allowed to enroll a course after he/she has satisfactorily passed all its pre-requisite courses.

A student shall be allowed to enroll only the regular semestral load. However, academic load for graduating students must be guided by appropriate CHED issuances.

All students in the BS Nursing program shall strictly adhere to the regular rotation of RLE and schedule of classes. The Special BS Nursing program provided in CMO No. 9 s. 2004 shall no longer be allowed.

ARTICLE X
RESIDENCY REQUIREMENTS

As a general rule, a candidate for graduation must have taken the last curricular year level in the college. The student shall be evaluated according to the criteria or system of evaluation required by the college to determine proficiency in all professional courses.

ARTICLE XI
SANCTIONS

Non-compliance with the provisions of this CMO shall, after due process, cause the Commission to revoke government permit/recognition or deny issuance of authority to operate the nursing program.

The average national passing percentage in the Philippine Nurses Licensure Examination from 2004 to 2008 is 45.91%. Two thirds (2/3) of 45.91% is thirty percent (30%), the basis for the implementation of gradual phase-out.

Thus, in the initial implementation of the gradual phase out of the nursing program, an average of below 30% for a three-year period (SY 2010-2011, 2011-2012, 2012-2013) in the Philippine Nurse Licensure Examination starting from 2013 shall be implemented by the CHED, subject to the following guidelines:

1. The official results of the Nurse Licensure Examination issued by the Board of Nursing of the Professional Regulation Commission shall be the basis in phasing-out of nursing programs.
2. The performance of the school shall be based upon the average rating obtained within the schoolyear, namely, ratings in the June and December examinations. If the school has only one examination undertaken in a year, this shall be considered the annual rating.

3. The average passing rate obtained by HEIs for the past three (3) years shall be the basis in phasing-out the program.

4. The computation of the 30% shall only involve the ratings of the examinees who took the Nurse Licensure Examination for the first time.

**ARTICLE XII**
**TRANSITORY PROVISION**

Higher education institutions that have been granted permit or recognition to offer the BS Nursing program are required to fully comply with all the requirements in this CMO within three (3) years after the date of effectivity. There shall be close monitoring of nursing programs by the Commission.

**ARTICLE XIII**
**SEPARABILITY AND REPEALING CLAUSE**

Any provision of this Order, which may thereafter be held invalid, shall not affect the remaining provisions.

All CHED issuances, rules and regulations or parts thereof that are inconsistent with the provisions of this CMO are hereby repealed.

**ARTICLE XIV**
**EFFECTIVITY CLAUSE**

Higher education institutions [HEIs] that opted to implement CMO No. 30 s. 2001 shall allow their students to the finish BSN curriculum under CMO No. 30 s. 2001 while those HEIs that opted to implement CMO No. 5 s. 2008 during the SY 2008-2009 shall allow their students to graduate under CMO No. 14 s. 2009.

This CMO shall take effect starting Schoolyear 2009-2010, fifteen (15) days after its publication in the Official Gazette or in a newspaper of national circulation.

**EMMANUEL Y. ANGELES**
Chairman

Quezon City, Philippines
April 28, 2009

Course Objectives: At the end of the course and given specific situations/conditions, the student should be able to:
1. describe the anatomic structures and physiologic mechanisms/processes/systems involved in the following physiologic concepts:
   1.1 locomotion
   1.2 fluid transport
   1.3 gas exchange
   1.4 fluid and electrolyte, acid/base dynamics
   1.5 nutrition metabolism
   1.6 chemical regulation
   1.7 neural regulation
   1.8 sensory intake
   1.9 protection
   1.10 awareness and response to the environment
   1.11 reproduction
2. utilize basic anatomical facts and physiological concepts and principles in the nursing care of individuals
Course Outline:

I. Anatomy
   A. Definition
      1. Types of Study
         a. Systematic Anatomy
         b. Regional Anatomy
         c. Surface Anatomy
   B. Physiology
      1. Definition
      2. Types of Study:
         a. According to the organism involved
         b. According to levels of organism within
            a given organism
   C. Structural and Functional organization
      1. Seven Structural Levels
         a. Chemical
         b. Organelle
         c. Cell
         d. Tissues
         e. Organ

Course Name : FUNDAMENTALS OF NURSING PRACTICE
Course Code : NCM 100
Course Description : This course provides the students with the overview of nursing as a science, an art and a profession. It deals with the concept of man as a holistic being comprised of bio- psycho- socio and spiritual dimensions. It includes a discussion on the different roles of a nurse emphasizing health promotion, maintenance of health as well as prevention of illness utilizing the nursing process. It includes the basic nursing skills needed in the care of individual clients.

Course Credit : 3 units lecture, 2 units RLE (Skills Lab)
Contact Hours/Sem : 54 hours lecture, 102 RLE hours Skills Lab
Prerequisite : General Chemistry, Theoretical Foundations of Nursing
Co-requisite : Anatomy & Physiology, Biochemistry
Placement : 1st Year, 2nd semester
Course Objectives: At the end of the course and given actual or simulated situations/conditions, the student will be able to:
1. utilize the nursing process in the holistic care of client for the promotion and maintenance of health
   1.1 Assess with the client his/her health status and risk factors affecting health
   1.2 Identify actual wellness/at risk nursing diagnosis
   1.3 Plan with client appropriate interventions for the promotion and maintenance of health
   1.4 Implement with client appropriate interventions for the promotion and maintenance of health
   1.5 Evaluate with client outcomes of a healthy status
2. ensure a well-organized recording and reporting system
3. observe bioethical principles and the core values (love of God, caring, love country and of people)
4. relate effectively with clients, members of the health team and others in work situations related to nursing and health; and,
5. observe bioethical concepts/ principles and core values and nursing standards in the care of clients
Course Outline:

I. Nursing as a Profession
   A. Profession
      1. Definition
      2. Criteria
   B. Nursing
      1. Definition
      2. Characteristics
      3. Focus: Human Responses
      4. Personal and professional qualities of a nurse
   C. History of Nursing
      1. In the world
      2. In the Philippines
         (include the history of own nursing school)
   D. Development of modern nursing
   E. Growth of Professionalism
      1. Profession
         a. Specialized education
         b. Body of knowledge
         c. Ethics
         d. Autonomy
      2. Carper’s four patterns of knowing
         a. Nursing science
         b. Nursing ethics
         c. Nursing esthetics
         d. Personal knowledge
   F. Overview of the Professional Nursing Practice
      1. Level of Proficiency according to Benner
         (Novice, Beginner, Competent, Proficient, Expert)
      2. Roles and Responsibilities of a Professional nurse
      3. Scope of Nursing Practice based on RA 9173
      4. Overview of the Code of Ethics for Nurses/Filipino Bill of Rights/Legal Aspects
      5. Professional/legal and moral accountability / responsibility
   G. Different Fields in Nursing
      1. Institutional nursing (hospital staff nursing)
      2. Community health nursing (school nursing/industrial nursing/public health nursing)
      3. Independent nursing practice
      4. Nursing in education
      5. Nursing in other fields
   H. Communication Skills
      1. Effective communication
      2. Purposes of therapeutic communication
      3. Components of communication
      4. Criteria for effective verbal communication
      5. Guidelines for active & effective listening
      6. Guidelines for use of touch
      7. Developmental consideration in communication
8. Communicating with people who are
a. Physically challenged
b. Cognitively challenged
c. Aggressive
9. General guidelines for trans-cultural therapeutic communication

I. Nursing Process
1. Assessment
2. Nursing Diagnosis (as a concept and process)
3. Planning (long-term, short-term, priority setting, formulation of objectives)
4. Intervention (collaborative, independent nursing interventions)
5. Evaluation (formative, summative)
6. Documentation of plan of care/reporting

J. Health and Illness:
1. Recall concepts learned about man as an individual and as a member of the family
2. Define health, wellness and illness
3. Explain the dimensions of wellness
4. Discuss the Health-Illness Continuum
5. Enumerate the stages of wellness and illness
6. Describe the three levels of Prevention

K. Levels of Care
1. Health promotion
2. Disease prevention
3. Health maintenance
4. Curative
5. Rehabilitative

L. Basic Interventions to Maintain
1. Healthy lifestyle,
2. Oxygenation
3. Fluid and electrolyte balance
4. Nutrition
5. Elimination
6. Temperature regulation
7. Mobility and exercise
8. Hygiene and comfort,
9. Safety, security and privacy
10. Psychosocial and Spiritual Concerns

M. Meeting needs related to death and dying/grief and grieving
1. Concept of death and dying/grief and grieving
2. Care of the terminally ill patients and their families
3. Post mortem care

II. Nursing as an Art
1. Definition of Arts
2. Why is nursing an art?
3. Concepts related to the art of nursing

</tr>
</tbody>
</table>
**Course Objectives:**

At the end of the course and given simulated and actual conditions/situations, the student will be able to:

1. Differentiate normal from abnormal assessment findings;
2. Utilize concepts, principles, techniques and appropriate assessment tools in the assessment of individual client with varying age group and development; and,
3. Observe bioethical concepts/principles and core values and nursing standards in the care of clients.

**Course Outline:**

I. Review of the Nursing Process

II. Health History Guidelines
   A. Interview
      1. Purpose
      2. Structure
      3. Guidelines of an effective interview
   III. Health History
      A. Personal profile
         1. Chief complaint of present illness
         2. Past health history
         3. Current medications
         4. Personal habits & patterns of living
         5. Psychosocial history
            a. Mental status assessment
               - Children and adolescent
               - Adults
      B. Functional assessment
         1. Adults
         2. Physical activities of daily living (PADC)
         3. Instrumental activities of daily living (IADL)
      C. Functional Assessment Tests
         1. Newborns – Apgar scoring system
         2. Infants & children – MMDST
         3. Adults
            a. Katz Index of Independence in ADL
            b. Barthel index
      D. Review of systems (symptoms)
      E. Assessment in pregnancy (e.g. LMP, EDC)
      F. Pediatric additions to health history (e.g. head circumference, weight, height, immunization)
      G. Geriatric additions to the Health History (e.g. immunization, current prescription medications, over the counter medications, ADL, social support, etc.)

III. Physical Examination
   A. Preparation guidelines
   B. PE guidelines
C. Techniques in physical assessment
   1. Inspection
   2. Auscultation
   3. Percussion
   4. Palpation

D. Continuing assessment
   1. Pain
   2. Fever

E. Pediatric adaptation
   1. General guidelines
   2. Specific age groups

F. Geriatric adaptations
   1. General guidelines
   2. Modifications

G. Cultural considerations
   1. Sequence of PE (adult/pedia/geriatric adaptations)
      a. Overview
      b. Integument
      c. Head
      d. Neck
      e. Back
      f. Anterior Truck
      g. Abdomen
      h. Musculoskeletal system
      i. Neurologic system
      j. Genitourinary system

H. Clinical alert
I. Documentation of findings
J. Patient & family education & home health teaching

IV. Diagnostic tests (routine laboratory exams)
V. Appropriate nursing diagnosis

**Course Objectives:**

At the end of the course, the student will be able to:

1. Apply concepts and principles of community health development in the care of communities and population groups.
2. Utilize the nursing process in the care of communities and population groups.
   a. Assess the health status of communities and population groups to identify existing and potential problems.
   b. Plan relevant and comprehensive interventions and programs based on identified priority problems.
   c. Implement appropriate plan of care to improve the health status of the communities and population groups.
   d. Evaluate the progress and outcomes of community health nursing interventions and programs.
3. Ensure a well-organized recording and reporting system.
4. Share leadership/relate effectively with others in work situations related to nursing and health.

**Course Outline:**

1. Overview of Community Health Nursing
   a. Community Health Nursing as a Field of Nursing Practice
      i. The hallmark of community health nursing is that it is population- or aggregate-focused.
      ii. CHN is a synthesis of nursing and public health practice
         1. emphasis on the importance of the “greatest good for the greatest number”
         2. assessing health needs planning, implementing and evaluating the impact of health services on population groups
         3. priority of health-promotive and disease-
preventive strategies over curative interventions
4. tools for measuring and analyzing community health problems; and
5. application of principles of management and organization in the delivery of health services to the community

iii. Basic concepts and principles of community health nursing
1. The family is the unit of care; the community is the patient and there are four levels of clientele in community health nursing.
2. The goal of improving community health is realized through multidisciplinary effort.
3. The community health nurse works with and not for the individual patient, family, group or community. The latter are active partners, not passive recipients of care.
4. The practice of community health nursing is affected by changes in society in general and by developments in the health field in particular.
5. Community health nursing is part of the community health system, which in turn is part of the larger human services system.

iv. Roles of the nurse in caring for communities and population groups
v. Brief history of community health/public health nursing practice in the Philippines

II. Community Health and Development Concepts, Principles and Strategies
a. Primary Health Care Approach
i. Definition; PHC as a philosophy, approach, structure and services
ii. Legal Basis of PHC in the Philippines
iii. Components of PHC
b. Health Promotion
i. Concept of health promotion (as embodied in the Ottawa Charter, November 1986)
ii. Health promotion strategies:
   1. Build healthy public policy
   2. Create supportive environments
   3. Strengthen community action
   4. Develop personal skills
   5. Reorient health services
iii. Examples of Theories/Models of Health Promotion: Pender, Bandura, Green
c. Community organizing towards community participation in Health
   i. Definition of Community Organizing
      1. Characteristics,
      2. Process,
      3. Phases
      4. Goal
   ii. Community participation in health: levels of community participation, factors affecting community participation

d. Capacity-building for sustainable community health Development towards community competence
   i. Concept of a sustainable community health development: integrated, community-based, comprehensive
   ii. Capacity-building strategies: health education, competency-based training for community health workers, supervision of lower level health workers

e. Partnership building and collaboration
   i. Networking
   ii. Linkage-building
   iii. Multi-sectoral collaboration
   iv. Interdisciplinary collaboration
   v. Advocacy

III. The Community Health Nursing Process
a. Assessment of Community Health Needs
   i. Components of community needs assessment:
      1. health status
      2. health resources
      3. health action potential
   ii. Community Diagnosis
      1. Definition
      2. Types of community diagnosis: comprehensive, problem-oriented or focused
      3. Steps in conducting the community diagnosis
   iii. Tools used in community diagnosis: demography, vital and health statistics, epidemiology
      1. Demography
         a. Definition and uses of demography
         b. Components of demography
            i. Describing population size
            ii. Describing population composition
            iii. Describing spatial distribution
         c. Sources of demographic data
      2. Vital and health statistics
a. Definition and uses of vital and health statistics
b. Common vital and health statistical indicators
   i. Fertility rates
   ii. Mortality rates
   iii. Morbidity rates

3. Epidemiology
a. Definition and uses of epidemiology
b. Epidemiologic concepts and principles
   i. Multiple Causation Theory or Ecologic Concept of Disease
      1. Agent-Host-Environment
      2. Models: web, wheel and triad
   ii. Natural history of disease
   iii. Levels of disease prevention
   iv. Concept of causality and association
c. Epidemiologic approach focusing on:
   i. Descriptive epidemiology
   ii. Analytical epidemiology

b. Planning of Community health nursing services
   i. Principles in community health planning
   ii. Bases for developing a community health plan
      1. health status
      2. health resources
      3. health action potential
   iii. Steps in making a plan: the planning cycle
   iv. Context in developing the community health plan
      1. Philippine health care delivery system
         a. Executive Order 102 (The Department of Health)
         b. RA 7160 (Local Health Systems)
         c. Levels of Health Care and Referral System
      2. Global health situation (Millennium Development Goals)
      3. National health situation (FOURmula One)
      4. Primary health care as an approach to health care delivery

IV. Implementing the community health nursing services
a. Components of program implementation
   i. Coordinating the health program
   ii. Monitoring health programs
   iii. Supervising the program staff
b. National health programs of the DOH
   i. Family health services
1. Maternal health
2. Family planning
3. Child health
   a. Infant and young child feeding
   b. Expanded program on immunization
   c. Integrated management of childhood illness
4. Nutrition program
5. Oral health program
6. Essential health packages for the adolescent, adult men and women and older Persons

ii. Control of non-communicable diseases
1. Integrated community-based non-communicable disease prevention program
2. Programs for the prevention of other non-communicable diseases
   a. National prevention of blindness
   b. Mental health and mental disorders
   c. Renal disease control program
   d. Community-based rehabilitation program

iii. Control of communicable diseases
1. National TB Program-Directly Observed Treatment, short-course (NTP-DOTS)
2. National Leprosy Control Program
3. Schistosomiasis Control Program
4. Filariasis Control Program
5. Malaria Control Program
6. Rabies Control Program
7. Dengue Control Program
8. Sexually-Transmitted Infections and AIDS Control Program

iv. Environmental Health
1. Water supply sanitation
2. Proper excreta disposal
3. Solid waste management
4. Vector control
5. Food sanitation
6. Air pollution
7. Proper housing

c. Specialized fields of community health nursing
   i. School health nursing
   ii. Occupational health nursing
   iii. Community mental health nursing

V. Evaluating community health nursing services
   a. Definition of evaluation
i. Types of evaluation: quantitative, qualitative  
ii. Aspects of evaluation: process, impact and outcome  
iii. Methods and tools of evaluation  
iv. Evaluation indicators  
b. Quality Assurance: Sentrong Sigla Movement

VI. Recording and Reporting  
a. Family Health Service Information System  
b. Components of FSHIS  
   i. Family Treatment Record  
   ii. Target Client List  
   iii. Reporting Forms  
   iv. Output Reports

Guide for RLE  
Provide opportunity to practice bag technique and other nursing procedures  
Provide for actual care of individual, family, population group and community as client. Requires competencies with emphasis on health promotion and disease prevention

Equipment and Materials (these could be found in nursing skills lab and in the community)  
CHN Bag complete with relevant equipment and supplies

<table>
<thead>
<tr>
<th>Course Name</th>
<th>MICROBIOLOGY AND PARASITOLOGY</th>
</tr>
</thead>
<tbody>
<tr>
<td>Course Code</td>
<td>Micro/Para</td>
</tr>
<tr>
<td>Course Description</td>
<td>This course is designed to assist students in the study of important microorganisms and parasites. It explains the physiology and pathogenic properties of bacteria, fungi and viruses as an introduction to disease causation, their biology, the infections they cause, host response to these infections and their mode of transmission, prevention, treatment and nursing responsibilities. The laboratory experiences provide specimen collection, handling and processing of specimens for isolation and identification of microorganisms and parasites involved in the infectious processes.</td>
</tr>
<tr>
<td>Course Credit</td>
<td>3 units lecture, 1 unit laboratory</td>
</tr>
<tr>
<td>Contact Hours/sem</td>
<td>54 lecture hours, 54 lab hours</td>
</tr>
<tr>

<td>2nd year, 1st semester</td>
</tr>
</tbody>
</table>
### Course Objectives
At the end of the course and given simulated/actual situations/conditions, the student will be able to:

1. Apply the concepts and principles of microbiology and parasitology in the care of individuals.
2. Utilize principles and techniques in the collection, handling of specimens and identification of microorganisms and parasites involved in the infectious processes.

### Course Outline

- **I. Scope of Microbiology**
  1. Organisms that make up the microbial world and the development of microbiology
  2. Microorganisms
  3. Division of microbiology
  4. Significance of microbiology
  5. Practical applications of microbiology
  6. Evolution of microbiology
  7. Basic laboratory equipment and procedures in the study of bacteria

- **II. Microbial Control**
  1. Techniques for controlling pathogenic microorganisms
  2. Surgical and medical asepsis
  3. Antimicrobial agents in therapy

- **III. Infection and Host Resistance**
  1. Infection and bacterial invasion
  2. Host response to infection
    a. Non-specific host resistance
    b. Specific host resistance
    c. Vaccines in the elimination of disease

- **IV. Pathogenic Microorganisms and Parasitic Helminthes**
  1. Normal human microbial flora and microorganisms pathogenic to man
  2. Protozoan and helminthes diseases of man

- **V. Microbial Disease of the Different Organ System**
  1. Skin and eye
  2. Nervous system
  3. Cardiovascular system
  4. Respiratory system
  5. Digestive system
  6. Urinary and reproductive system

---

**Course Name**: CARE OF MOTHER, CHILD AND FAMILY  
**Course Code**: NCM 101  
**Course Description**: Principles and techniques of caring for the normal mothers, infants, children and family and the application of principles and concepts on family and family health nursing process.  
**Course Credit**: 4 units lecture, 4 units RLE [1 unit Skills Lab/3 units Clinical]
<table>

**Course Objectives:**
At the end of the course, given actual or simulated situations /conditions involving the client (normal pregnant woman, mother, and/or newborn baby, children and the family), the student will be able to:

1. Utilize the nursing process in the holistic care of client for the promotion and maintenance of health.
   1.1 Assess with the client his/her health condition and risk factors affecting health
   1.2 Identify wellness /at risk nursing diagnosis
   1.3 Plan with client appropriate interventions for health promotion and maintenance of health
   1.4 Implement with client appropriate interventions for health promotion and health maintenance taking into consideration relevant principles and techniques
   1.5 Evaluate with client the progress of one’s health condition and outcomes of care.
2. Ensure a well-organized recording and reporting system
3. Observe bioethical principles and the core values (love of God, caring, love country and of people)
4. Relate effectively with clients, members of the health team and others in work situations related to nursing and health

**Course Outline**

I. The Family and Family Health
   1. Concepts/ Definition of family
   2. Family structure and functions
   3. Universal characteristics of families
   4. Characteristics of a healthy family
   5. Family stages and tasks
   6. Levels of prevention in family health

II. The Family Health Nursing Process
   1. Definition of family health nursing & family nursing process
   2. Principles of family nursing process
   3. Steps of the family health nursing process
   4. Initial assessment/data base for family nursing practice
   5. Family structure/characteristics/dynamics
   6. Social, economic & cultural factors
   7. Health status of each family member
   8. Values & practices on health promotion

III. Methods of Data Gathering
   1. Health assessment of each family member
   2. Observation
   3. Interview
   4. Review of records/reports & laboratory results
   5. Assessment of home & environment
6. Tools used in family assessment: genogram, ecomap, initial database, family assessment guide

IV. Typology of Nursing Problems in Family Nursing Practice
1. 1st level assessment: identify health threats, foreseeable crisis, health deficits & wellness potential/state
2. 2nd level assessment: determining family’s ability to perform the family health tasks on each health threat, health deficit, foreseeable crisis or wellness potential

V. Statement of a Family Health Nursing Problem- health problem and cause/ contributing factors or health condition and factors related with non-performance of family health tasks

VI. Developing the Care Plan
1. Priority setting: criteria
2. Defining/setting goals/objectives
3. Specifying intervention plan
4. Developing the evaluation plan, specifying methods/tools

VII. Categories of nursing interventions in family nursing practice include:
1. Human becoming: methods/processes
2. Competency-based teaching
3. Motivation-support for behavior change/lifestyle modification

VIII. Categories of health care strategies and intervention
1. Preventive
2. Curative
3. Rehabilitative
4. Facilitative
5. Facilitation
6. Direct

IX. Evaluation
1. Qualitative & quantitative data for evaluation
2. Methods & sources of evaluative data
3. Steps in evaluation
4. Evaluation criteria
5. Evaluation in family nursing practice

X. Records in Family Health Nursing Practice
1. Importance & uses
2. Types of records & reports

XI. Mother and Child Health
1. Procreative health
   a. Definition and theories related to procreation
   b. Process of human reproduction
   c. Risk factors that will lead to genetic disorders
   d. Common tests for determination of genetic abnormalities
   e. Utilization of the nursing process in the prevention of genetic alteration and in the care of clients seeking services before & during conception

XII. Antepartum/Pregnancy
1. Anatomy & physiology of the male and female
<p>| | |</p>

</table>
14. Preparation of the labor & delivery room
15. Preparation of health personnel

XIV. Post Partum

1. Definition
2. Specific body changes on the mother
3. Psychological changes on the mother
4. Phases of puerperium
   - “Taking In”
   - “Taking Hold”
   - “Letting Go”
5. Monitoring of vital signs, uterine involution, amount & pattern of lochia, emotional responses, responses to drug therapy, episiotomy healing
6. Possible complications during post partum: bleeding & infection
7. Appropriate nursing diagnoses
8. Nursing care of mothers during post partum
   a. Safety measures: limitations in movement, protection from falls, provision of adequate clothing, wound care e.g. episiotomy
   b. Comfort measures: exercises, initiation of lactation, relief of discomforts like breast engorgement and nipple sores, hygienic measures, maintaining adequate nutrition
   c. Measures to prevent complication: ensuring adequate uterine contraction to prevent bleeding, adequate monitoring, early ambulation, prompt referral for complications
   d. Support for the psychosocial adjustment of the mother
   e. Health teaching needs of mother, newborn, family
   f. Accurate documentation and reporting as needed
9. Health beliefs & practices of different cultures in pregnancy, labor delivery, puerperium
10. Current trends in maternal and child care
11. Family planning
   a. Natural methods- Standard Days Method (SDM) with cycle beads, Billing’s Method, sympto-thermal method, lactation amenorrhea method (LAM)
   b. Artificial methods- use of hormones, intra-uterine device, barrier methods, tubal ligation, vasectomy

XV. The Newborn

A. Profile of the newborn

1. Physiologic function & appearance
   - APGAR score, Ballard’s score, Review of systems, Anthropometric measurements (weight, head, chest, abdomen circumference, length, other relevant measures)
2. Vital signs, patent airway
<p>| | |</p>

G. The Schooler and the Family
1. Definition of terms
2. Growth & development - biological, psychosocial, cognitive, moral, spiritual, social & self-concept development
3. Coping with concerns related to normal growth and development
4. Promotion of health during school age period
5. Prevention of injury

H. The Adolescent & the Family
1. Definition of terms
2. Growth & development – biologic, psychosocial, cognitive, moral, spiritual and social development
3. Promotion of health during adolescence

I. Adulthood
1. Early adulthood
   a. Theories, physiological, cognitive, moral & psychosocial development
   b. Nursing implications
2. Middle adulthood
   a. Physical, cognitive, moral and psychosocial development
   b. Nursing implications
3. Late adulthood
   a. Viewpoints on aging
   b. Theories of aging
   c. Biologic, sociologic, psychologic changes
   d. Needs of older persons
   e. Nursing implications
Guide for RLE

Provide for actual hospital and community experiences to ensure that competencies are developed in the following:

- Prenatal
- Intrapartal
- Post partal
- Immediate care of the newborn

Provide the opportunity to do the following related clinical experiences:

AT LEAST THREE (3) ACTUAL DELIVERIES properly supervised in any of these settings:

- Lying-in/Birthing Centers
- Hospitals (any category)
- One home/domiciliary delivery may be allowed as long as the two others are done in any of the above settings first.

AT LEAST THREE (3) NEWBORNS GIVEN IMMEDIATE CARE in settings where actual deliveries are performed.

In the event that the required competencies are not developed within the allotted hours/weeks, the nursing student/s shall be made to “extend” his/her Related Learning Experience (RLE) exposure until the expected competencies are satisfactorily achieved.

To standardize documentation, a prescribed form shall be completed right after the related clinical experience.

Provide opportunities to participate in Expanded Program of Immunization [EPI]

Equipment and Materials

Delivery set, delivery table, functional birthing model, pelvic model, newborn with placenta, weighing scale for infants, Doppler apparatus, fetoscope, perineal flushing tray, breast care tray, perlilight, nipple shield, breast pump.

Baby’s Layette, cord dressing tray, oil bath tray, ophthalmic ointment, Vitamin K, injection, baby’s bath tub, feeding bottle, immunization tray, MMDST kit and manual.

Visual aids on family planning methods, breast feeding, growth charts, immunization schedules, developmental landmarks, video on actual delivery

B. Nursing Care of the client with high-risk labor & delivery & her Family

1. High-Risk factors:
   (may happen at anytime during the course of labor to a client who has been otherwise been healthy throughout her pregnancy & may be related to stress/stressor; adaptive process):
   - passenger or fetus
   - passage way or pelvic bones & other pelvic structure
   - powers or uterine contractions
   - placenta
   - clients' psyche or psychologic state

2. Problems of the Passenger
   a. Fetal malposition
      1. Types of fetal malposition
      2. Nursing care
      3. Medical Management
   b. Fetal malpresentation
      1) Vertex malpresentation
         a) brow presentation
         b) face presentation
         c) sincipital presentation
      2) Breech presentation
         a) types
         b) maternal risks
         c) vaginal evolving of breech
         d) external/podalic version
      3) Shoulder presentation
         a) Compound presentation
      4) Nursing care of client with malpresentation
   c. Fetal distress
      1) causes
      2) signs/symptoms
      3) nursing interventions
   d. Prolapse umbilical cord
      1) cause
      2) contributing factors
      3) assessment & nursing diagnoses
      4) nursing interventions.

3. Problems with the passageway
   a. abnormal size or shape of the pelvis
   b. cephalopelvic disproportion
   c. shoulder dystocia
   d. nursing care of client with problems of the passageway
4. Problems with the Powers
   a. dystocia or difficult labor
      ▪ hypertonic uterine dysfunction
      ▪ hypotonic uterine dysfunction
      ▪ abnormal progress in labor
      ▪ retraction rings
   b. premature labor
   c. precipitate labor and birth
   d. uterine prolapse
   e. uterine rupture
5. Placental problems
   a. Implantation in the lower uterine segment
   b. Premature detachment of placenta
6. Problems with the psyche factors
   a. Inability to bear down properly
   b. Fear/anxiety

C. Nursing Care of the High-Risk Postpartal Client
1. Postpartal hemorrhage
   a. Early postpartal hemorrhage
   b. Late postpartal hemorrhage subinvolution
2. Postpartal puerperal infection
   a. Endometritis
   b. Wound infection
   c. UTI
3. Thromboembolic disorders
4. Postpartal psychiatric disorder

D. Care of couple with problems of infertility
1. Causes of infertility in males and females
2. Diagnostic tests
3. Nursing interventions

II. Child

A. Nursing care of the high-risk newborn to maturity
1. Problems related to maturity
   a. Prematurity
   b. Postmaturity
2. Problems related to gestational weight
   a. Small for gestational age (SGA)
   b. Large for gestational age (LGA)
3. Acute conditions of the neonates such as:
   a. Respiratory distress syndrome
   b. Meconium aspiration syndrome
   c. Sepsis
   d. Hyperbilirubinemia
   e. Sudden death syndrome (SDS)
B. Common health problems that develop during infancy
   example: intussusception, failure to thrive, sudden infant death
syndrome, colic, trisomy 21, cleft palate, imperforated anus, hirschsprung's disease, spina bifida, hydrocephalus, otitis media, meningitis, febrile seizures, autism/ADHD
C. Health problems common in toddlers
   example: burns, poisoning, child abuse, cerebral palsy
D. Health problems common in preschooler
   example: leukemia, wilm's tumor (nephroblastoma), asthma, urinary tract infection (UTI)
E. Health problems most common in school aged children
   example: diabetes mellitus, rheumatic fever, rheumatic arthritis, scabies, pediculosis, impetigo
F. Health problems common in adolescent
   example: scoliosis, bone tumors, accidents (trauma/injury), STD, amenorrhea, dysmenorrhea, obesity, anorexia nervosa, substance abuse, suicide

III. Family
A. The family with health problems
1. Assessment of the family capability to perform health tasks
   a. Primary assessment
   b. Secondary assessment
2. Family health problem identification
   a. Determination of categories of family health problems
      ▪ Health deficits
      ▪ Health threats
      ▪ Foreseeable crisis/stress points
      ▪ Enhanced capability for health promotion
3. Definition of contributing risk factors
   ▪ Predisposing factors
   ▪ Enabling factors
   ▪ Reinforcing factors
4. Criteria of setting priorities among family health problems:
   ▪ Nature of the problem
   ▪ Magnitude of the problem
   ▪ Modifiability of the problem
   ▪ Preventive potential
   ▪ Salience
5. Tool of analysis
   ▪ Social determinants of health

B. Planning of individual & family health nursing care
1. Concepts, principles, phases and components in planning family health interventions
2. Programs and services that focus on primary & secondary prevention of communicable and non-communicable diseases
   a. Examples of DOH programs:
      ▪ National Tuberculosis Program – Direct Observed
      ▪ Short Course Treatment (NTP-DOTS)
      ▪ Integrated Management of Childhood Illness (IMCI)
      ▪ Control of Diarrheal Diseases (CDD)
3. Identification of goal of care for priority problems
4. Parameters for selecting nursing interventions:
   a. Applicable, appropriate and available to the home community setting
   b. Promotes client safety, comfort & hygiene
   c. Standards of care & interventions that address acute and chronic illness
5. Principles of collaboration and advocacy to be considered to ensure continuity of care

C. Implementation of Individual & Family Health Nursing Care
   1. Component of care in acute and chronic illness
      a. Health promotion
      b. Disease prevention
      c. Restorative
      d. Curative
      e. Rehabilitative care
   2. Bio-behavioral interventions and holistic care for individuals & Family with specific problems in oxygenation, fluid and electrolyte balance, metabolic and endocrine function
   3. Strategies in meeting health problems of family
      a. Promoting behavior change
      b. Creating a supportive environment towards healthy lifestyle
4. Principles of behavior change
5. Referral system
6. Concept & principles of collaboration & advocacy

D. Evaluation of progress and outcome of care
   1. Methods & tools in evaluating effectiveness of family health interventions
   2. Sources of evaluative data
   3. Alternative strategies & approaches for specific problems & objectives

E. Ensuring a well organized & accurate documentation & reporting
   1. Standard format
   2. Legal principles involved in documentation

<td>NuDiet</td>
</tr>
<tr>
<td>Course Description</td>
<td>This course deals with the study of food in relation to health. It covers nutrients and other substances and their action, and interaction and balance in relation to health and diseases and the process by which organism ingests, digests, absorbs, transports, utilizes and excretes food substances. It will also focus in the therapeutic and food service aspects of the delivery of nutritional services in hospitals and other healthcare institutions.</td>
</tr>
<tr>
<td>Course Credit</td>
<td>3 units lecture, 1 unit laboratory</td>
</tr>
<tr>
<td>Contact Hours/sem</td>
<td>54 lecture hours, 54 laboratory hours</td>
</tr>
<tr>
<td>Prerequisite</td>
<td>General Chemistry, Biochemistry, Anatomy and Physiology, Micro-Parasitology</td>
</tr>
<tr>
<td>Placement</td>
<td>2nd year, 2nd semester</td>
</tr>
<tr>
<td>Course Objectives:</td>
<td>At the end of the course, given relevant situations/conditions, the student will be able to: 1. Apply appropriate principles and techniques to assist clients in maintaining nutritional health 2. Utilize knowledge of diet therapy in assisting clients needing dietary modifications</td>
</tr>
</tbody>
</table>
| Course Outline      | A. Introduction to nutrition  
|                     | 1. Definition of terms  
|                     | 2. Nutrition concepts  
|                     | 3. Classification of nutrients  
|                     | B. Basic Tools in nutrition  
|                     | 1. FNRI & USDA Food Guide Pyramid  
|                     | 2. 10 NGF  
|                     | 3. RDA or RENI  
|                     | 4. FEL  
|                     | 5. Food Labeling  
|                     | C. Six essential nutrients  
|                     | 1. Carbohydrates  
|                     | a. Functions  
|                     | b. Deficiencies/toxicity  
|                     | c. Food sources  
|                     | 2. Protein  
|                     | a. Functions  
|                     | b. Deficiencies/toxicity  
|                     | c. Food sources  
|                     | 3. Fats and waters  
|                     | a. Functions  
|                     | b. Deficiencies/toxicity  
|                     | c. Food sources  
|                     | 4. Vitamins and Minerals  
|                     | a. Functions  
|                     | b. Deficiencies/toxicity  
|                     | c. Food sources  
|
D. Dietary computations
   1. Body mass index and classification
   2. Desirable Body Weight (DRW) Determination
   3. Total Energy Requirement (TER) & distribution of TER
   4. Application to Food Exchange List (FEL) & sample menu
E. Nutrition throughout the lifespan
   1. Pregnancy
      a. Stages
      b. Nutritional problems and interventions
      c. Recommended diet
   2. Lactation
      a. Common nutritional problems and interventions
      b. Recommended diet
   3. Infancy
      a. Nutritional problems and intervention
      b. Factors affecting nutritional status
      c. Guidelines in feeding
      d. Recommended diet
   4. Pre-Schoolers & Schoolers
      a. Nutritional problems and interventions
      b. Guidelines in feeding
      c. Recommended diet
   5. Adolescents
      a. Nutritional problems and intervention
   6. Adulthood
      a. Nutritional problems and interventions
      b. Recommended diet
F. Diet Therapy
   1. General diets
      - Regular/full Diet
      - High fiber diet
      - Vegetarian diets
      - Therapeutic diets
   2. Diets modified in consistency
      - Clear liquid
      - Full liquid
      - Cold liquid/ T&A diet
      - Soft bland
      - Bland
      - Residue restricted
      - Low fiber
   3. Diets Modified in Composition
      - Low calorie
      - High calorie
- High protein
- Low protein
- Low fat
- Low cholesterol
- Low carbohydrate
- Low salt/sodium restricted
- Low potassium
- Low purine/purine restricted

4. Tube feeding
   a. Enteral feeding
      - Types
      - Indications & contraindications for use
      - Complications and problems
   b. Types of enteral formulas
      - Intact
      - Hydrolyzed
      - Modular
   c. Feeding administration
      - Continuous drip
      - Bolos
      - Combination
   d. Parenteral Feeding
      - Indications & contraindications for use
      - Complications & problems

G. Dietary management of some common medical conditions including computations and preparations and their rationale

**Course Name** : HEALTH EDUCATION  
**Course Code** : HealthEd  
**Course Description** : The course includes discussions on health education concepts, principles, theories and strategies as they apply in the clinical and classroom situations.  
**Course Credit** : 3 units lecture  
**Contact Hours/sem** : 54 lecture hours  
**Prerequisite** : None  
**Placement** : 2nd year, Summer  
**Course Objectives** : At the end of the course, given relevant situations/conditions, the student will be able to:  
   1. Apply principles, theories and strategies of health education in assisting clients to promote and maintain their health  
   2. Develop an instructional design to meet the learning needs of clients  
**Course Outline** :  
   A. Health education perspective  
   1. Historical development in health education  
   2. Issues and trends in health education  
      2.1 Health issues and the biological, psychological, and
sociological aspects of health and disease
2.2 Contemporary health and the promotion of optimal health throughout the lifespan
3. Theories in health education - (e.g. Pender’s Health Promotion Theory, Bandura’s Self Efficacy Theory, Health Belief Model, Green’s Precede-Proceed Model)
B. Perspective on teaching and learning
1. Overview of education on health care
2. Concepts of teaching, learning, education process vis-a-vis nursing process, historical foundations for the teaching role of the nurse,
3. Role of the nurse as a health educator
4. Hallmarks of effective teaching in nursing
5. Principles of good teaching practice in undergraduate education
6. Barrier to Education and Obstacles to Learning
7. Applying learning theories to health care practice
   a. Principles of learning
   b. Learning theories
   c. Types of learning
   d. Learning styles of different age groups
8. Planning and conducting classes
   a. Developing a course outline/syllabus
   b. Formulating course objectives
   c. Selecting content
   d. Selecting teaching methods
   e. Choosing a textbook/references
   f. Conducting the class
C. Characteristics of the learner
1. Determinants of Learning
   a. Learner's characteristics
   b. Assessment of the learner
   c. Assessing learning needs
2. Motivation and behavior of the learner
   a. Learning principles
   b. Motivation and behavior change theories
3. Literacy and readability
   a. Reading levels of clients
   b. Assessing literacy
   c. Teaching strategies for low literate patients
   d. Developing printed educational materials
D. Teaching strategies and methodologies for teaching and learning
1. Traditional teaching strategies
   a. Lecturing
   b. Discussion
c. Questioning
d. Using audio visuals
e. Interactive lecture

2. Activity-based strategies
   a. Cooperative learning
   b. Simulations
   c. Problem-based learning
   d. Self-learning modules

3. Computer teaching strategies
   a. Computer-assisted instructions
   b. Internet
   c. Virtual reality

4. Distance learning
   a. Interactive television classes
   b. Via internet

5. Teaching psychomotor skills
   a. Approaches to teaching skills
   b. Assessment of psychomotor skill learning

6. Clinical teaching
   a. Purpose of clinical laboratory
   b. Models of clinical teaching
   c. Preparation for clinical instruction
   d. Conducting a clinical laboratory session

E. Assessment and evaluation
   a. Learning assessment of clients
   b. Methods of evaluation
   c. Qualities of good measurement
   d. Interaction process analysis/process recording

---

Course Name : INFORMATICS
Course Code : IT
Course Description : This course deals with the use of information technology system and data standards based on nursing informatics principles/theories. It further deals with the utilization of clinical information systems in the management and decision-making of patient care. A laboratory session shall be provided for practice application.
Course Credit : 2 units lecture; 1 unit laboratory
Contact Hours/sem : 36 lecture hours; 54 laboratory hours
Prerequisite : College Algebra
Placement : 2nd Year, Summer
Course : At the end of the course and given relevant actual or simulated

### Course Name: CARE OF CLIENTS WITH PROBLEMS IN OXYGENATION, FLUID AND ELECTROLYTE BALANCE, NUTRITION AND METABOLISM AND ENDOCRINE

<table>
<thead>
<tr>
<th>Course Code</th>
<th>:----------</th>
</tr>
</thead>
<tbody>
<tr>
<td>NCM 103</td>
<td></td>
</tr>
</tbody>
</table>

**Course Description:**
This course deals with the principles and techniques of nursing care management of sick clients across lifespan with emphasis on the adult and the older person, population group in any setting with alterations/problems in oxygenation, fluid and electrolyte balance, nutrition and metabolism and endocrine function.

<table>
<thead>
<tr>
<th>Course Credit</th>
<th>8 units lecture, 6 units RLE (1 unit Skills Lab; 5 units Clinical)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contact Hours/sem</td>
<td>144 hours lecture and 306 hours RLE</td>
</tr>
</tbody>
</table>

**Prerequisite:**
NMC 102

**Placement:**
3rd year, 1st semester

**Course Objectives:**
At the end of the course, and given actual clients with problems in oxygenation, fluid and electrolyte balance, nutrition and metabolism, and endocrine function, the student should be able to:

1. Utilize the nursing process in the care of individuals, families in community and hospital settings.
   - Assess with client/s his/her/their condition/health status through interview, physical examination, interpretation of laboratory findings
   - Identify actual and at-risk nursing diagnosis
   - Plan appropriate nursing interventions with client/s and family for identified nursing diagnosis
   - Implement plan of care with client/s and family
   - Evaluate the progress of his/her/their client’s condition ad outcomes of care
2. Ensure a well organized and accurate documentation system;
3. Relate with client/s and their family and the health team appropriately;
4. Observe bioethical concepts/ principles, core values and nursing standards in the care of clients; and,
5. Promote personal and professional growth of self and others.

**Course Outline:**
I. The individual client with problems in oxygenation, fluid & electrolyte balance, nutrition and metabolism & endocrine function:

A. Risk factors among clients that contribute to the development of problems in the following:
   1. Oxygenation – cardiovascular risk factors (modifiable and non-modifiable)
   2. Fluid and electrolyte – potential factors for exceeding renal reserve capacity, dietary habits to include salt intake,
hypertension, infection, diabetes
3. Nutrition and metabolism - risk factors related to malnutrition, obesity
4. Endocrine function - risk factors related to endocrine hypo or hyper-functioning

B. Identifies significant subjective data from the client history related to problems in oxygenation, fluid electrolyte, nutrition and metabolism and endocrine function
1. Chief complaints
2. Relevant information, to include eleven functional patterns
   - Health Perception management pattern
   - Nutritional/metabolic pattern
   - Elimination pattern
   - Activity/exercise patterns
   - Cognitive/perceptual pattern
   - Sleep-rest pattern
   - Self perception –self concept pattern
   - Role relationship pattern
   - Sexuality-reproductive pattern
   - Coping-stress tolerance pattern
   - Value-belief pattern

C. Principles and techniques of physical examination in newborn, children, adults, deviations from normal:
1. Oxygenation
   a. Inspection – gas exchange; perfusion
   b. Palpation – gas exchange; perfusion
   c. Percussion – gas exchange
   d. Auscultation – gas exchange – heart sound, breath sound, deviations; fluid transport
2. Fluid and electrolyte balance
   a. Inspection – signs of dehydration, overhydration,
   b. Palpation – edema, ascites, neck vein filling, hand vein filling, neuromuscular irritability, characteristic of pulse
   c. Percussion – abdomen for presence of air, fluid
   d. Auscultation – rates
3. Gastrointestinal Function – IPPA
   a. Inspection – color, texture of skin, mucous membrane, growth patterns, scars, masses
   b. Auscultation – bowel sounds, bruits
   c. Palpation – focus on GIT for presence of masses, ascites, rebound tenderness, distention
   d. Percussion – liver span, masses, ascites
4. Metabolism and endocrine function (focus on GIT, systemic effects of endocrine malfunction) -IPPA
   a. Inspection – color, texture of skin, mucous membrane, growth patterns, obesity
   b. Auscultation – bruit, heart sounds, breath sounds
   c. Palpation – organ - thyroid enlargement, masses, edema
d. Percussion – fluid, edema
e. Others – weight, delayed healing of wounds

C. Results and implications of diagnostic/laboratory examinations of clients with reference to problems in:

1. Oxygenation:
   a. Screening procedure – peak flow meter
   b. Diagnostic procedures
      • Non-invasive:
        - Pulmonary: e.g. sputum microscopy, chest x-ray, pulmonary function tests, smoke analyzer
          Fagerstrom test – standardized degree of nicotine dependence
        - Cardiac: ultrasound, ECG, 2-D echo, stress test,
        - Vascular: doppler ultrasonography
        - Blood: pulse oximeter.
      • Invasive:
        - Pulmonary: bronchoscopy, ABG, thoracentesis, pulmonary angiography
        - Cardiac: CO determination, cardiac catheterization,
          CVP, hemodynamics monitoring, enzyme levels,
          Serum, Cholesterol,
        - Vascular: angiography,
        - Blood: CBC and bone marrow biopsy

2. Fluid and Electrolyte Balance:
   a. Diagnostic tests
      • Non-invasive: electrolyte determination, intake and output, KUB-IVP and ultrasound
      • Invasive – biopsy,
   b. Weight, VS

3. Gastrointestinal function
   • Non-invasive: ultrasound of the abdomen, stool culture
   • Invasive: to include: barium swallow, esophagoscopy,
     biopsy, cytology examination, gastric secretion
     analysis, endoscopy (gastroscopy, duodenoscopy),
     proctosigmoidoscopy and rectal examination

4. Metabolic and endocrine function
   a. Screening: glucose tolerance test
      • Non-invasive: e.g. GI x-ray, ultrasound abdomen, Radio-
        iodine assay (RAI), protein bound iodine (PBI), thyroid
        scan, free thyroxin level, basal metabolic rate (BMR),
        thyroxin stimulating hormone (TSH) test, OGTT (Glucose
        tolerance test) urinalysis (glycosuria, ketonuria)
      • Invasive: e.g. percutaneous transhepatic
        cholangiogram, liver function test, derum thyroxine and
        triiodothyronine test, Iodine 131 uptake, blood sugar tests
        (fasting blood sugar (FBS), random blood sugar (RBS),
        glycosylated hemoglobin (Hgb), two-hour post prandial
        blood glucose, endocrine assay
D. Pathophysiologic Mechanisms:

1. Alterations in oxygenation
   a. Alteration in gas exchange – ventilatory dysfunction, impaired diffusion, impaired perfusion
   b. Alteration in cardiac performance – heart rate problems, impaired stroke volume secondary to altered preload, afterload, myocardial contractility
   c. Alteration in vascular integrity – transport network impairment
   d. Alteration in oxygen carrying capacity of the blood – decreased circulating erythrocytes (anemia), increased circulating erythrocytes (polycythemia)

2. Fluid electrolyte imbalances
   a. Volume impairment – fluid volume deficit, fluid volume excess, third space fluid shift
   b. Osmotic imbalances – hyponatremia, hypernatremia
   c. Ionic concentration problems – hypo- and hyperkalemia; hypo- and hypercalcemia; hypo- and hypermagnesemia; hypo- and hyperphosphatemia
   d. Acid and base imbalances – metabolic acidosis and alkalosis; respiratory acidosis and alkalosis

3. Alterations in GIT function
   a. Disturbances in ingestion – problems in buccal cavity and esophagus
   b. Disturbances in digestion – peptic acid disease, gastritis and gastric cancer
   c. Disturbances in absorption – malnutrition, malabsorption syndrome and inflammatory bowel conditions
   d. Disturbances in elimination – bowel obstruction, hemorrhoids, diarrhea and constipation

4. Alterations in endocrine function
   a. Hypo- and Hyperfunction of the pituitary organ
   b. Hypo- and Hyperfunction of the hypothalamus
   c. Hypo- and Hyperfunction of the thyroid organ
   d. Hypo- and Hyperfunction of the parathyroid organ
   e. Hypo- and Hyperfunction of the adrenal organ
   f. Hypo- and Hyperfunction of the gonads
   g. Problems in glucose metabolism – hypoglycemia and hyperglycemia (IDM, NIDDM)

E. Nursing diagnoses taxonomy pertinent to problems/alteration in:

1. Oxygenation
   a. Ineffective breathing pattern
   b. Ineffective airway clearance
   c. Impaired gas exchange
   d. Inability to sustain spontaneous ventilation
   e. Dysfunctional ventilatory weaning response
   f. Decreased cardiac output (CO)
   g. Altered tissue perfusion systemic
h. Impaired gas exchange related to altered O2 carrying capacity of blood due to decreased erythrocytes/hemoglobin
   i. Activity intolerance related to malnutrition, tissue hypoxia,

2. Fluid and electrolyte imbalance
   a. Risk for fluid volume deficit
   b. Fluid volume deficit
   c. Fluid volume excess
   d. High risk for injury related to electrolyte deficit/excess
   e. High risk for injury related to acid/base imbalance
   f. Altered urinary elimination
   g. Impaired integumentary integrity

3. Gastrointestinal function
   a. Alteration in nutrition less than body requirement
   b. Alteration in nutrition more than body requirement
   c. Alteration in oral mucous membrane integrity
   d. Alteration in comfort: epigastric pain/abdominal pain
   e. Fluid volume deficit

4. Endocrine function
   a. Alterations in nutrition less than body requirement
   b. Fluid volume deficit
   c. Activity intolerance

F. Principles of various modalities of management
   1. Health promotive
   2. Disease preventive
   3. Curative and restorative

G. Principles of management
   1. For altered pulmonary function
      - Airway patency
      - Oxygen therapy
      - Adequate ventilation
      - Drug therapy
      - Hydration
      - Removal of secretion
      - Prevention of infection
      - Prevention of complications
      - Prevention of psychosocial problems
      - Rehabilitation
   2. For cardiac function
      - Hemodynamics monitoring
      - O2 therapy
      - Drug therapy
      - Hydration
      - Prevention of infection
      - Prevention of complications
      - Prevention of psychosocial problems
      - Rehabilitation
   3. Oxygen carrying capacity of the blood
      - Blood component replacement
- O2 therapy
- Drug therapy
- Hydration
- Prevention of infection
- Prevention of complications
- Prevention of psychosocial problems
- Rehabilitation

4. Fluid Volume Deficit
   - Determination and management of cause
   - Hydration
   - Blood transfusion as needed
   - Drug therapy - electrolyte
   - Supportive management
   - Prevention of infection
   - Prevention of complication
   - Prevention of psychosocial problems
   - Rehabilitation

5. Fluid Volume Excess
   - Determination and management of cause
   - Drug therapy – diuretics, electrolytes
   - Dietary restriction - sodium
   - Supportive management
   - Prevention of infection
   - Prevention of complication
   - Prevention of psychosocial problems
   - Rehabilitation

6. Electrolyte Deficit – hyponatremia, hypokalemia, hypocalcemia, hypomagnesemia, hypophosphatemia
   - Determination and management of cause
   - Drug therapy – electrolyte replacement
   - Dietary management
   - Supportive management
   - Prevention of complication
   - Prevention of psychosocial problems
   - Rehabilitation

7. Electrolyte Excess- hypernatremia, hyperkalemia, hypercalcemia, hypermagnesemia, hyperphosphatemia
   - Determination and management of cause
   - Drug therapy – electrolyte replacement
   - Dietary management
   - Supportive management
   - Prevention of complication
   - Prevention of psychosocial problems
   - Rehabilitation

8. Metabolic Alkalosis – Base bicarbonate excess
   - Determination and management of cause
   - Drug therapy -
   - Dietary management
- Supportive management
- Prevention of complication
- Prevention of psychosocial problems
- Rehabilitation

9. Metabolic Acidosis – base bicarbonate deficit
- Determination and management of cause
- Drug therapy
- Dietary management
- Supportive management
- Prevention of complication
- Prevention of psychosocial problems
- Rehabilitation

10. Respiratory Alkalosis – carbonic acid deficit
- Determination and management of cause
- Drug therapy
- Dietary management
- Supportive management
- Prevention of complication
- Prevention of psychosocial problems
- Rehabilitation

11. Respiratory Acidosis – carbonic acid excess
- Determination of cause
- Drug therapy
- Dietary management
- Supportive management
- Prevention of complication
- Prevention of psychosocial problems
- Rehabilitation

12. Disturbances in ingestion
- Determination and management of cause
- Hydration
- Drug therapy
- Dietary management
- Supportive management
- Prevention of infection
- Prevention of complication
- Prevention of psychosocial problems
- Rehabilitation

13. Disturbances in digestion
- Determination and management of cause
- Hydration
- Drug therapy
- Dietary management
- Supportive management
- Prevention of infection
- Prevention of complication
- Prevention of psychosocial problems
- Rehabilitation
14. Disturbances in absorption
   - Determination and management of cause
   - Hydration
   - Drug therapy
   - Dietary management
   - Supportive management
   - Prevention of infection
   - Prevention of complication
   - Prevention of psychosocial problems
   - Rehabilitation

15. Disturbances in elimination
   - Determination and management of cause
   - Hydration
   - Drug therapy
   - Dietary management
   - Supportive management
   - Prevention of infection
   - Prevention of complication
   - Prevention of psychosocial problems
   - Rehabilitation

16. Disturbances in hepatic, biliary and pancreatic functions
   - Determination and management of cause
   - Hydration
   - Drug therapy
   - Dietary management
   - Supportive management
   - Prevention of infection
   - Prevention of complication
   - Prevention of psychosocial problems
   - Rehabilitation

17. Disturbances in endocrine hypo-function
   - Determination and management of cause
   - Drug therapy – diuretics, electrolytes
   - Dietary restriction - sodium
   - Supportive management
   - Prevention of infection
   - Prevention of complication
   - Prevention of psychosocial problems
   - Rehabilitation

18. Disturbances in endocrine hyperfunction
   - Determination and management of cause
   - Drug therapy – diuretics, electrolytes
   - Dietary restriction - sodium
   - Supportive management
   - Prevention of infection
   - Prevention of complication
   - Prevention of psychosocial problems
   - Rehabilitation
H. Pharmacologic actions, therapeutic uses, side effects, indications, contraindications, and nursing responsibilities:

1. Pulmonary
   - Bronchodilators
   - Expectorants
   - Antitussives
   - Antihistamines

2. Cardiac
   - Sympathomymetic agents
   - Sympatholytic agents
   - Anti-anginal agents
   - Anti-arrhythmic agents
   - Angiotensin converting enzyme inhibitors
   - Antilipemic agents
   - Anticoagulant agents
   - Thrombolytics
   - Peripheral vascular agents

3. Blood
   - Hematinics
   - Vitamin supplements

4. Fluid
   a. Parenteral fluids –
      - hypotonic,
      - hypertonic
      - isotonic solutions

5. Electrolyte
   - Sodium
   - Potassium
   - Calcium
   - Magnesium
   - Phosphate

6. Diuretics
   - Potassium-sparing
   - Potassium-losing
   - Osmotic diuretics

7. Vitamin D supplements

8. Gastrointestinal, hepato-biliary and pancreatic function
   - Antiemetics
   - Anticoagulant
   - Hematinics agents
   - Laxatives and stool softeners
   - Antipruritus
   - Vitamin supplement
   - Antacids
   - Antihyperlipidemics
   - Antispasmodics
   - Antidiarrheal
9. Endocrine function
   - Corticosteroids
   - Alpha-adrenergic blocking agents
   - Alpha-adrenergic blocking agents
   - Beta-adrenergic blocking agents
   - Tyrosine inhibitors
   - Dopamine receptor antagonists
   - Glucocorticoids
   - Parathyroid hormone agents
   - Thyroid hormone agents
   - Insulin
   - Oral hypoglycemic agents

10. Perioperative care
    - Preoperative – pre-operative medications
    - Intraoperative – anaesthetic agents – general, spinal, blocks
    - Postoperative – analgesics, opioids, antipyretics, antibiotics

I. Purpose, indications, nursing responsibilities for the following surgical and special procedures:

1. Pulmonary
   a. Surgical procedures – tracheostomy, thoracostomy, lung resection, lobectomy, pneumonectomy, thoracoplasty, decortication
   b. Special procedures – endotracheal/tracheal suctioning and care, humidification, IPPB, ventilatory assist

2. Cardiac
   a. Surgical procedures – coronary artery bypass, pacemaker insertion, valve replacement, repair of congenital abnormality, insertion of ventricular assist device, heart transplant
   b. Special procedures – laser therapy, basic life support, advance life support

3. Vascular
   a. Surgical procedures – endarterectomy, aneurysmectomy, insertion of intravascular stents
   b. Special procedures – application of antiembolic stockings

6. Blood forming organs
   a. Surgical procedures – bone marrow aspiration, bone marrow transplant
   b. Special procedures - blood component transfusion, reverse isolation

5. Renal dysfunction
   a. Major surgical procedures - nephrectomy, nephrostomy, cystectomy, ureterostomy, renal transplants, urinary diversion
   b. Special procedures - peritoneal dialysis, hemodialysis, bladder training, cystoclysis/bladder irrigation

6. Gastrointestinal dysfunction
   a. Surgical procedures – gastrostomy, gastrectomy, colostomy,
hemorrhoidectomy, gastrointestinal bypass, ileostomy
b. Special procedures – parenteral hyperalimentation; feeding per nasogastric, jejunostomy, gastrostomy tubes; colostomy care and irrigation, dietary planning for common GT and endocrine problems; administering medications via NGT, J tube, G tube; hot sitz bath

7. Endocrine dysfunction
   a. Surgical procedures –
      ▪ Thyroidectomy,
      ▪ Parathyroidectomy
   b. Special procedures –
      ▪ monitoring of blood glucose levels,
      ▪ maintenance of blood glucose – diet, exercise, drugs

J. Safe and comprehensive perioperative nursing care
   1. Assessment and care during the perioperative period
   2. Techniques in assisting the surgical team during the operation
   3. Principles of safety, comfort and privacy during the perioperative period

   1. Nursing responsibilities during the perioperative period
      ▪ Preoperative - physical, psychological, spiritual preparation
      ▪ Intraoperative – circulating nurse functions, scrub nurse functions
      ▪ Postoperative – airway, breathing, circulation priorities. Meeting the physical, psychological and spiritual needs of the client.

K. Steps/pointers in decision making and prioritization with client/s having problems in oxygenation, fluid and electrolyte balance, metabolic and endocrine function

L. Principles, concepts and applications of bioethics in the care of clients

M. Developing outcome criteria for clients with problems in oxygenation, fluid and electrolyte balance, metabolic and endocrine function

N. Appropriate discharge plan including health education

O. Accurate recording and documentation

Guide for RLE

Provide opportunities to demonstrate the procedures for oxygenation, fluid electrolytes balance, nutrition and metabolism, endocrine functions, and intra-operative care.

Regarding the intra-operative care experience, provide opportunities for the following:

1. Act as a circulating nurse in THREE (3) MAJOR SURGICAL CASES IN THE HOSPITAL SETTINGS

2. Act as a scrub nurse in AT LEAST THREE (3) MAJOR VARIED SURGICAL CASES IN THE HOSPITAL SETTINGS ONLY
In the event that the required competencies are not developed within the allotted hours/weeks, the nursing student/s shall be required to extend his/her Related Learning Experience (RLE) exposure until the expected competencies are satisfactorily achieved.

To standardize documentation, a prescribed form shall be accomplished upon completion of the related clinical experience.

Provide opportunities for actual hospital and community experiences to ensure that competencies are developed.

| Equipment and Materials [these could be found in nursing skills lab, base hospital, affiliating centers] | Alteration in Oxygenation: Oxygen (O2) tank, O2 regulator, humidifier, monkey wrench, O2 tubings, O2 cannula/catheter, O2 masks, croupette, O2 tent, suction catheters, suction machine, suction catheters, oxymeter, peak flow meter, ventilatory support equipments, nebulizer, one-way/two-way/three-way water seal drainage, microscope, glass slide, BP apparatus, stethoscope, basic life support model, cardiac monitor, EKG machine cardiac arrest board, gloves, tongue depressor, Blood transfusion set, hemoglobin test
Alteration in fluid electrolyte balance - weighing scale, tape measure, stethoscope, IV tubings, different types of IV fluids (hypotonic, hypertonic and isotonic), peritoneal dialysis set, dialyzing solution, hemodialysis machine
Alteration in nutrition and metabolism – body weight, tape measure, BMR, body fat analyser, anthropometric measurement, special diets, nasogastric or gastrostomy feeding, enterostomal care (colostomy, ileostomy), hot Sitz bath,
Alteration in endocrine function – blood glucose monitoring, ketone determination, diet therapy computation for diabetics, insulin injection,
Pain - measurement of pain perception
Perioperative care - pre-operative care (physical, psychological and spiritual preparation) intraoperative: (gowning, gloving, simulated OR table, scrubs Etc); postoperative care: (suction apparatus, oral airway, endotracheal tube, nasogastric/gastrostomy tubes, different types of dressings) |

<th>Course Name</th>
<th>ECONOMICS WITH TAXATION AND LAND REFORM</th>
</tr>
</thead>
<tbody>
<tr>
<td>Course Code</td>
<td>Econ</td>
</tr>
<tr>
<td>Description</td>
<td>This course is an introduction to economics, the basic concepts of microeconomics, money and banking, economic growth and development and international economics and its implication to nursing. Also discussed are the basic concepts of taxation and land reform.</td>
</tr>
<tr>
<td>Course Credit</td>
<td>3 units lecture</td>
</tr>
<tr>
<td>Contact Hours/sem</td>
<td>54 lecture hours</td>
</tr>
<tr>
<td>Placement</td>
<td>3rd Year, 1st Semester</td>
</tr>
<tr>
<td>Course Objectives</td>
<td>To introduce the students to the concepts of economics applied to health and enable them to appreciate and apply the principles in health program, decision-making and development. At the end of the course, the student shall be able to: 1. Appreciate the basic concepts and rationale of economics. 2. Discuss the concept of health with emphasis on the use of health outcomes. 3. Apply the basic concepts of the law of supply and demand to health related issues. 4. Discuss the various roles of the different health sectors and in the provisions of health goods and services and analyze how the government and private health sectors finance health care. 5. Describe the basic principles of evaluating health programs and projects.</td>
</tr>
<tr>
<td>Course Outline</td>
<td>1. Introduction to Economics 3. The Concepts of Economics a. Man’s work against scarcity b. General economics resources: land, labor, capital &amp; technology</td>
</tr>
</tbody>
</table>
c. The universal objective of attaining the maximum output out of a given input
d. Three components of economics: alternative choices, the choices and their costs, the effect of choices on the future

II. General economic concepts: the law of supply and demand
1. The demand curve
   a. Characteristics of the demand curve; the law of downward sloping demand
   b. Relationships between the price of goods and the quantity demanded
   c. Economic factors which affect the demand curve
   d. Demand shift
2. The Supply curve
   a. Characteristics of the supply curve
   b. The Law of upward sloping supply: relationship between the price of goods and the quantity of procedures are willing to supply
   c. Economic factors which affect the supply of goods
   d. The supply shift
3. The supply and demand inter-relationships
   a. Price, demand and supply
   b. The equilibrium point
   c. Elasticities
Case No. 1: Cases on law of supply and demand apply to healthcare policy making

III. Introduction to the concept of health
1. Definition of health
2. How is “health” objectively measured?
3. What determines health? The underlying and proximate determinants of health

IV. Economics and the health care sector
1. Demand for health care: determinants of health seeking behavior:
   a. Economic variables which affect the demand for health care
   b. Demographic variables which affect the demand for health care
   c. Why are health services and commodities different from other consumer goods?
2. The supply of health services
   a. Factors which affect the supply of health manpower
   b. Trade-off between high quality manpower and abundant supply
   c. Experiences from manpower substitution
   d. Experiences from other input substitution
3. Concept of demographic transition
   Changes in age, health risks and health –stock and its effect on:
a. Probability of getting ill
b. The type of illnesses experienced
c. The type of health care commodities demanded

3.2 Population composition, demographic transition and its applications on health program planning

Case No. 2: “Where do we put our money?” A case on demographic transition, population, composition, and comprehensive health programs of Japan and the Philippines

V. Economic evaluation of health programs
   1. Health cost concepts
      Type of costs: direct and indirect costs, recurrent and capitalized costs
   2. Cost minimization [description]
   3. Cost benefit analysis [description]
   4. Cost utility analysis [description]

VI. Description of the health care sector
   Reaction Paper: “Health Status of the Philippines and Asia”

VII. Health finance and managed care
   1. Current trends and growth of alternative moods of healthcare financing in the Philippines
      Out-of-pocket/fee-for-service
      Medical insurance
      Health maintenance organizations and other managed care organizations
   2. Out-of-pocket healthcare financing: advantages and disadvantages
   3. Concepts: medical insurance
      Costs and pricing of medical insurance: actuarial (medical) costs and administrative costs
   4. Health maintenance organizations: an off-shoot of medical insurance and emphasis on preventive and promotive healthcare
      Growth and trends of the HMO industry
      Conceptual framework of the organization of HMOs
   5. Other managed-care organizations: description and concepts
      Changing roles of physicians, nurses and allied medical professionals under a managed-care system
      Emphasis on efficiency outcomes

VII-A. Descriptive study on Philippine health maintenance organizations
   1. Trends in Philippine HMOs
   2. Examples of HMO plan benefit coverage
   3. A glimpse on the financial/operational performance of HMOs

VIII. Taxation
IX. Land reform

<th>Course Name:</th>
<th>CARE OF CLIENTS WITH PROBLEMS IN INFLAMMATORY AND IMMUNOLOGIC RESPONSE AND PERCEPTION AND COORDINATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Course Code</td>
<td>NCM 104</td>
</tr>
<tr>
<td>Course Description</td>
<td>This course deals with the concepts, principles and theories of human behavior and the care of the sick client across the lifespan with emphasis on the adult and the older person, population group experiencing alterations in Inflammatory and Immunologic Response and perception and coordination in varied settings.</td>
</tr>
<tr>
<td>Course Credit</td>
<td>5 units lecture, 4 units RLE (1 unit skills lab, 3 unit clinicals)</td>
</tr>
<tr>
<td>Contact Hours/Sem</td>
<td>90 Lecture Hours/ 204 RLE Hours</td>
</tr>
<tr>
<td>Prerequisite</td>
<td>NCM 103</td>
</tr>
<tr>
<td>Placement</td>
<td>3rd Year, 2nd Semester</td>
</tr>
<tr>
<td>Course Objectives</td>
<td>At the end of the course, and given actual clients, population group, with problems in inflammatory and immunologic response and perception and coordination, the student should be able to:</td>
</tr>
<tr>
<td></td>
<td>1. Utilize the nursing process in the care of individuals, families in community and hospital settings.</td>
</tr>
<tr>
<td></td>
<td>- Assess with client/s his/her/their condition/health status through interview, physical examination, interpretation of laboratory findings.</td>
</tr>
<tr>
<td></td>
<td>- Identify actual and at-risk nursing diagnosis.</td>
</tr>
<tr>
<td></td>
<td>- Plan appropriate nursing interventions with client/s and family for identified nursing diagnosis.</td>
</tr>
<tr>
<td></td>
<td>- Implement plan of care with client/s and family.</td>
</tr>
<tr>
<td></td>
<td>- Evaluate the progress of his/her/their client’s condition ad outcomes of care.</td>
</tr>
<tr>
<td></td>
<td>2. Ensure a well-organized and accurate documentation system.</td>
</tr>
<tr>
<td></td>
<td>3. Relate with client/s and their family and the health team appropriately.</td>
</tr>
<tr>
<td></td>
<td>4. Observe bioethical concepts/principles and core values and nursing standards in the care of clients.</td>
</tr>
<tr>
<td></td>
<td>5. Promote personal and professional growth of self and others.</td>
</tr>
<tr>
<td>Course Outline</td>
<td>1. Alteration in inflammatory and immunologic response</td>
</tr>
<tr>
<td></td>
<td>A. Risk factors assessment and screening procedures among clients that contribute to the development of problems in inflammatory and immunologic reaction</td>
</tr>
<tr>
<td></td>
<td>B. Significant subjective data from client – relevant information based on chief complaints, functional patterns, including psychosocial and behavioral assessment</td>
</tr>
<tr>
<td></td>
<td>2. Alterations in perception and coordination</td>

87
clients that contribute to the development of problems in perception and coordination

B. Significant subjective data from client – relevant information based on chief complaints, functional patterns, including psychosocial and behavioral assessment

C. Principles and techniques of physical examination in newborn, children & adults and deviations from normal in perception & coordination

1. Inflammatory and immunologic reactions
   a. Inspection – color, lesions, masses
   b. Palpation – turgor, tenderness, masses, body temperature, tenderness

2. Neurologic assessment
   a. Inspection: loss of consciousness (LOC), hearing, sight, papillary changes, gait, posture, ADL, muscle strength, discharge
   b. Palpation: tenderness, muscle strength
   c. Percussion: reflexes

3. Visual and auditory assessment
   a. Inspection: hearing, sight, papillary changes, discharge, bleeding
   b. Palpation: pain, tenderness, presence of mass/lesions

4. Locomotion assessment
   a. Inspection: posture and gait, ADL, swelling, atrophy, deformity, deformity, muscle strength, discharge
   b. Palpation: deviation/limitation in range of motion (ROM), tenderness, deformity of joints, muscle size and strength, crepitation on movement of joints, presence of subcutaneous nodules
   c. Palpation: turgor, tenderness, masses, body temperature, tenderness

D. Results and implications of diagnostic/laboratory examinations of clients with reference to problems in:

1. Inflammatory and immunologic reaction –
   a. Diagnostic tests –
      ▪ Non-invasive: urinalysis, culture and sensitivity tests, x-ray
      ▪ Invasive – CBC, antistreptolysin titer, biopsy, blood Chemistry, CSF, Gram Staining, ELISA, Western Blot, tests for emerging infections e.g. SARS

2. Perception and coordination –
   a. Neural regulation
      ▪ Non-invasive diagnostic procedures: skull x-ray, electroencephalogram (EEG), magnetic resonance imaging (MRI), ultrasound,
      ▪ Invasive diagnostic procedures: cerebral angiography, lumbar puncture, CT scan
ventriculogram
b. Visual Auditory
   ▪ Non-invasive diagnostic procedures:
     visual acuity, visual field testing, ophthalmoscopy,
     slit lamp, audiometry
   ▪ Invasive diagnostic procedures:
     CT scan, electronystagmography, ear culture,
     sensitivity
c. Locomotion
   ▪ Non-invasive diagnostic procedures:
     electromyogram (EMG)
   ▪ Invasive diagnostic procedures:
     biopsy, cerebrospinal & synovial fluid determination,
     serum calcium, phosphorus, alkaline phosphatase
determination
E. Pathophysiologic mechanisms of Alterations in perception and
coordination
   1. Inflammatory and Immunologic reactions
      a. Inflammatory reactions
      b. Bacterial conditions
      c. Bullous diseases
      d. Infestation and parasitic diseases
      e. Vaccine-preventable infectious diseases
      f. Others – AIDS, STDs
   2. Immunologic reactions
      a. Hypersensitivity reactions
      b. Immunodeficiency
      c. Autoimmune disorders
   3. Neural regulation
      a. Motor disturbances
      b. Seizures
      c. Sensory deviations
      d. Head ache ad pain
      e. Altered state of consciousness
   4. Visual and Auditory
      a. Disturbances in visual perception: blindness,
         inflammatory disturbances: neoplastic disturbances,
         traumatic interferences with visual perception,
         absence of visual perception, congenital and neonatal
         visual disturbances,
      b. Disturbances in auditory perception: deafness/hearing
         loss, inflammatory/infection, trauma, meniere’s
         syndrome, degenerative changes, disturbances of
         hearing, obstructive problems
   5. Locomotion
      a. Infections/Inflammatory disorders
      b. Abnormalities in the curvature of the spine
      c. Degenerative disorders
d. Traumatic injuries  
e. Congenital disorders  
f. Bone tumors  

F. Nursing diagnoses taxonomy pertinent to problems/alteration in perception and coordination  
1. Inflammatory and immunologic reaction  
   a. Impaired skin integrity  
   b. Activity intolerance  
   c. Potential for infection  
   d. Disturbances in self-concept  
   e. Ineffective family coping  
   f. Social isolation  

2. Neural regulation  
   a. Altered cerebral tissue perfusion  
   b. Impaired verbal communication  
   c. Impaired swallowing  
   d. Potential for injury  
   e. Activity intolerance  
   f. Ineffective individual coping  
   g. Knowledge deficit  

3. Visual and auditory perception  
   a. Alteration in sensory perception: visual/auditory  
   b. Potential for infection  
   c. Self esteem disturbance  
   d. Potential for injury  
   e. Knowledge deficit  

4. Locomotion  
   a. Alteration in comfort: pain/pruritus  
   b. Knowledge deficit  
   c. Impaired physical mobility  
   d. Disturbance in self-concept  
   e. Altered nutrition  

G. Principles of Management for altered Perception coordination  
1. Inflammatory and immunologic reaction  
   a. Determination and management of cause  
   b. Drug therapy  
   c. Prevention of infection  
   d. Supportive management  
   e. Prevention of complications  
   f. Rehabilitation  

2. Neural regulation  
   a. Determination and management of cause  
   b. Airway patency  
   c. Oxygen therapy  
   d. Adequate ventilation  
   e. Drug therapy  
   f. Hydration  
   g. Removal of secretion
h. Prevention of infection
i. Psychosocial interventions
j. Seizure precaution
k. Increased ICP precaution
l. Prevention of complications
m. Rehabilitation

3. Visual and auditory perception
   a. Determination and management of cause
   b. Drug therapy
   c. Supportive management for visual/auditory impaired
   d. Prevention of infection
   e. Psychosocial interventions
   f. Prevention of complication
   g. Rehabilitation

4. Locomotion
   a. Determination and management of cause
   b. Drug therapy
   c. Supportive management: immobility precaution
   d. Removal of secretion
   e. Prevention of infection
   f. Prevention of complications
   g. Rehabilitation

H. Pharmacologic actions, therapeutic use, side effects, indications, contraindication, and nursing responsibilities for perception and coordination

1. Inflammatory and Immunologic reactions
   a. Antibiotics
   b. Antifungal agents
   c. Keratolytic agents
   d. Anticholinergic agents
   e. Adrenergic agents
   f. Antihistamines
   g. Anti-inflammatory agents
   h. Corticosteroids
   i. Immunologic agents
   j. Vaccines

2. Neural regulation
   a. Anti-convulsants
   b. Osmotic diuretics
   c. Corticosteroid
   d. Antibiotics
   e. Antipyretics
   f. Anti-inflammatory agents

3. Visual and auditory perception
   a. Miotic agents
   b. Corticosteroids
   c. Mydriatic agents
   d. Antibiotics

Guide for RLE

Provide opportunities to demonstrate the procedures for inflammatory and immunologic response, perception and coordination.
In the event that the required intra-operative competencies in NCM 103 are not achieved within the allotted hours/weeks, the nursing student/s shall be made to complete the competencies in this course.

To standardize documentation, a prescribed form shall be completed right after the related clinical experience.

Provide opportunities for actual clinical hospital and community experiences to ensure competencies are developed.

### Equipment and Materials

Alterations in inflammatory and immunologic reactions: hand washing facility, isolation barrier techniques and materials, needles and syringes for skin testing.

Alterations in neural regulation: flashlight/penlight, tongue depressor, cotton, safety pin, reflex hammer, watch with second hand.

Alterations in visual and auditory: ophthalmoscope, otoscope, penlight, ear irrigating device, Snellen chart, tuning fork, hearing augmentation device.

Alterations in locomotion: sand bag, splints, types of traction, types of casts, orthopedic bed/appliances, crutches, walker

Videos on exercises, neurologic assessment

<tr>
<td>Course Objectives</td>
<td>At the end of the course, and given actual clients with maladaptive patterns of behavior, the student shall be able to: 1. Utilize the nursing process in the care of individuals, families in community and hospital settings.  - Assess client/s with his/her/their condition through mental status examination, physical examination, interpretation of diagnostic procedures.</td>
</tr>
</tbody>
</table>
- Identify actual and potential nursing diagnosis.
- Plan appropriate nursing interventions with client/s and family for identified nursing diagnosis.
- Implement plan of care with client/s and family.
- Evaluate the progress of his/her/their client’s condition and outcomes of care.

2. Apply knowledge and understanding of maladaptive patterns of behavior in providing safe and quality care to clients.
4. Ensure a well-organized and accurate documentation system.
5. Relate with client/s and their family and the health team appropriately.
6. Observe bioethical concepts/principles, core values and nursing standards in the care of clients.
7. Promote personal and professional growth of self and others.

Course Outline :

I. Overview of psychiatric nursing
   A. Evolution of mental health-psychiatric nursing practice
   B. The mental health nurse
      1. Role
      2. Essential qualities
   C. Interdisciplinary team
   D. The mental health illness continuum

II. Mental health-psychiatric nursing practice
   A. Personality theories and determinants of psychopathology: Implications for mental health-psychiatric nursing practice
      1. Psychoanalytic
      2. Behavioral
      3. Interpersonal
      4. Cognitive
      5. Humanistic
      6. Psychobiologic
      7. Cognitive
      8. Psychosocial
      9. Psychospiritual
      10. Eclectic
   B. General assessment considerations
      1. Principles and techniques of h-Psychiatric nursing interview
      2. Mental status examination
      3. Diagnostic examinations specific to psychiatric patients
   C. Building nurse-client relationship
      1. Nurse-client interaction vs. nurse-client relationship
      2. Therapeutic use of self
3. Therapeutic communication
   a. Characteristics
   b. Techniques
4. Goals in the one-to-one relationship
5. Phases in the development of nurse-client relationship

D. Documentation in psychiatric nursing practice
   1. Problem-oriented recording
      a. SOAP
   2. Narrative recording
   3. Process recording

E. Therapeutic modalities, psychosocial skills and nursing strategies
   1. Biophysical /somatic interventions
      a. Electroconvulsive and other somatic therapies
      b. Psychopharmacology
   2. Supportive Psychotherapy
      a. Nurse-patient relationship therapy
      b. Group therapy
      c. Family therapy
   3. Counseling
   4. Mental health teaching/client education
   5. Self-enhancement, growth/therapeutic groups
   6. Assertiveness training
   7. Stress management
   8. Behavior modification
   9. Cognitive restructuring
   10. Milieu therapy
   11. Play therapy
   12. Psychosocial support interventions
   13. Psychospiritual Interventions
   14. Alternative Medicine/Therapies

F. Concept of Anxiety
   1. Defining characteristics of Anxiety
   2. Levels of Anxiety
   3. Manifestations of Levels of Anxiety
      a. Physiologic
      b. Psychologic
   4. Ego Defense Mechanisms
      a. Four levels of Defense

G. Crisis
   1. Types of crisis
   2. Phases of Crisis Development
   3. Characteristics of Crisis
   4. Crisis Intervention

III. Care of clients with maladaptive patterns of behavior across the lifespan (childhood, adolescent, adulthood)

A. The Nursing Process applied to Psychiatric Nursing Practice:
   1. Assessing human response to the different maladaptive patterns of behavior
| a. Self-awareness and Use of Self  
| b. Bio-Psycho-Social and Behavioral data  
| 2. Nursing Diagnosis and Outcome identification  
| 3. Planning and implementing nursing intervention  
| a. Biological  
| b. Psychosocial  
| 4. Evaluation and treatment outcomes  
| B. Maladaptive Patterns of Behavior  
| 1. Age-Related Maladaptive Patterns: Disorders Across the Lifespan  
| 2. Anxiety-Related Disorders  
| a. Anxiety disorders across the lifespan  
| - Panic Disorder  
| - Phobias  
| - Post traumatic stress disorder  
| - Acute Stress disorder  
| - Obsessive-compulsive disorder  
| - Generalized Anxiety Disorder  
| b. Somatoform disorders  
| - Somatization disorder  
| - Conversion disorder  
| - Hypochondriasis  
| - Pain disorder  
| - Body Dysmorphic disorder  
| c. Dissociative disorders  
| - Depersonalization  
| - Psychogenic Amnesia  
| - Psychogenic Fugue  
| - Dissociative Identity Disorder/ Multiple Personality disorder  
| 3. Psychophysiological Response and Sleep  
| 4. Personality Disorders  
| a. Childhood Personality disorders  
| - Conduct disorder  
| - Oppositional Defiant Behavior  
| b. Odd/eccentric behaviors  
| - Paranoid personality disorder  
| - Schizoid personality disorder  
| - Schizotypal personality disorder  
| c. Dramatic, emotional, erratic behaviors  
| - Antisocial personality disorder  
| - Borderline personality disorder  
| - Narcissistic personality disorder  
| - Histrionic personality disorder  
| d. Anxious, fearful behaviors  
| - Obsessive compulsive personality disorder  
| - Dependent personality disorder  
|
- Avoidant personality disorder
e. Passive aggressive
6. Substance-related disorders: substance abuse, dependence, intoxication, withdrawal and polysubstance dependence
   a. Central nervous system depressants
      - Alcohol
      - Sedatives-hypnotics and anxiolytics
      - Opioids
   b. Central nervous system stimulants
      - Caffeine
      - Nicotine
      - Amphetamine and cocaine
   c. Hallucinogens
d. Cannabis
e. Inhalants
f. Nursing Issues
7. Mood disorders
   a. Reactive attachment disorder
   b. Bipolar I disorder
   c. Bipolar II disorder
d. Cyclothymic disorder
e. Dysthymic disorder
f. Major depressive disorder
g. Clients at risk for suicidal and self-destructive behavior
8. Schizophrenia and other Psychoses
   a. Schizophrenia
      - Catatonic type
      - Paranoid type
      - Undifferentiated type
      - Disorganized type
      - Residual type
   b. Other Psychotic disorders
      - Schizophreniform disorder
      - Schizoaffective disorder
      - Delusional disorder
      - Brief psychotic disorder
      - Shared psychotic disorder
9. Cognitive disorders
   a. Fetal alcohol syndrome
   b. Attention deficit hyperactive disorder
c. Autism
d. Delirium
e. Dementia
f. Alzheimer’s disease
g. Diffuse Lewy body disease
h. Korsakoff’s disease
i. Huntington’s disease

   - duty of justice  
   - duty of beneficence  
   - duty of improvement  
   - duty of non-maleficence |
| D. The calling of the health care provider | 1. The health care profession  
2. The client  
3. The health care provider  
4. Health care provider-client relationship |
| E. The Qualities and responsibilities of a good health care provider to the client, society and its profession | |
| F. Virtues, vices, & habits of a health care provider | 1. Virtues  
2. Vices  
3. Habits  
   a. Types of good habits  
   b. Types of bad habits |
4. Virtues of the health care provider
   - Fidelity
   - Honesty
   - Integrity
   - Humility
   - Respect
   - Compassion
   - Prudence
   - Courage

5. Vices of the health care
   - Fraud
   - Pride
   - Greed

G. Basic ethical principles
   - Stewardship
   - Totality
   - Double effect
   - Cooperation
   - Solidarity

H. Major bioethical principles
   - Respect for person & justice
   - Non-maleficence
   - Beneficence

I. Application of bioethical principles to the care of the sick
   1. Functions of informed consent
      - Protective and participative
   2. Rights of a patient

<tr>
<td>Prerequisite</td>
<td>Biostatistics</td>
</tr>
<tr>
<td>Placement</td>
<td>3rd year, 2nd semester</td>
</tr>
</tbody>
</table>
Course Objectives: At the end of the course and given actual situation, the student will be able to:
1. Discuss the major phases of the research process.
2. Present a group research proposal based on an identified clinical/situational problem.

Course Outline:

A. Introduction to nursing research
   1. Definition of nursing research
   2. The importance of research in nursing
   3. Roles of nurses in research
   4. Evolution of nursing research
   5. Purposes of nursing research

B. Overview of the research process in quantitative and qualitative studies
   1. Major phases of a research process
      a. The conceptual phase
         - Formulating and delimiting the problem
         - Sources of research problem
         - Criteria in evaluating research problem
         - Criteria for stating research problem
      b. Reviewing the related literature
         - Purpose of literature review
         - Categories of references
         - Locating relevant literature for research review
      c. Defining the framework and developing conceptual and theoretical frameworks
      d. Definition of important terms: concept, construct, conceptual models and statistical models
      e. Formulating hypotheses
         - Purpose of research hypotheses
         - Types of hypotheses
         - Criteria considered when stating hypotheses
   2. The Design and planning phases
      a. Selecting a research design
      b. Major categories of research design
         - Experimental designs
         - Non-experimental designs
         - Qualitative designs
      c. Characteristics of research designs
      d. Identifying the population to be studied
         - Differences between total & target populations
         - How to determine sample
      e. Designing the sampling plan
         - Methods of sampling
      f. Specifying methods to measure variables
- Primary methods
  - Self report/questionnaire
  - Observation
  - Interviews
  - Bio-physiologic measurements
- Secondary methods

C. Ethical aspects of nursing research
   1. Ethical principles for protecting study participants
      a. Beneficence
      b. Respect of human dignity
      c. Justice
   2. Procedures for protecting study participants
      a. Informed consent
      b. Risk/benefit assessment
      c. Confidentiality procedures
      d. Debriefings and referrals
      e. Treatment of vulnerable groups
      f. Institutional reviews, boards and external reviews

D. Steps of writing a good research proposal

<tr>
<td>Course Objectives</td>
<td>At the end of the course, and given actual clients with problems in cellular aberrations, acute biologic crisis and emergency, the student should be able to: 1. Utilize the nursing process in the care of individuals, families in community and hospital settings. 2. Assess with client/s his/her/their condition/health status</td>
</tr>
</tbody>
</table>
through interview, physical examination, interpretation of laboratory findings
- Identify actual and potential nursing diagnosis.
- Plan appropriate nursing interventions with client/s and family for identified nursing diagnosis.
- Implement plan of care with client/s and family
- Evaluate the progress of his/her/their client’s condition and outcomes of care

2. Ensure a well organized and accurate documentation system

3. Relate with client/s and their family and the health team appropriately

4. Observe bioethical concepts/principles, core values and nursing standards in the care of clients

5. Promote personal and professional growth of self and others

Course Outline:

I. The Individual across the lifespan
   A. Risk factors assessment and screening procedures among clients that contribute to the development of cellular aberration—lung, breast, uterine, prostate, colorectal and skin
   B. Significant subjective data from client—relevant information based on chief complaints, functional patterns, including psychosocial and behavioral assessments
   C. Principles and techniques of physical examination in newborn, children, adults, deviations from normal:
      1. Cellular aberration
         a. Inspection—vasculature, symmetry, movement, nodules, discharges, masses
         b. Auscultation—heart sounds, breath sounds, bowel sounds, vascular sounds, friction rub
         c. Palpation—masses, tenderness, nodules, lesions, distention
         d. Percussion—gas patterns, areas of flatness and dullness, liver span, masses, ascites
   3. Acute biologic crisis or life threatening situation
      Standard assessment of the critically ill (focused on history-taking, discriminating PE—airway, breathing circulation, including hemodynamics status)

   D. Results and implications of diagnostic/laboratory examinations of clients with reference to problems in:
      1. Cellular aberration
         a. Screening: BSE, pap smear, rectal examination,
         b. Non-invasive: MRI, CT scan, bone scan, ultrasound, thyroid scan
         c. Invasive: biopsy, digital rectal examination, cyst
aspiration, cystoscopy, lymph angiography, cerebral arteriography

2. Acute biologic crisis/multiorgan problem
   a. Non-invasive: ECG, cardiac rhythms,
   b. Invasive: ABG, hemodynamic monitoring, CVP, pulmonary capillary wedge pressure (PCWP)

E. Pathophysiologic mechanisms:
1. Cellular aberrations
   a. Solid tumors – lung cancer, breast, uterine cancer, prostate cancer, colorectal, brain cancer
   b. Liquid tumors – lymphomas, leukemias

2. Acute biologic crisis /multiorgan system dysfunction/ emergency
   - Cardiac failure
   - Acute myocardial infarction
   - Acute pulmonary failure
   - Acute renal failure
   - Stroke
   - Increased intracranial pressure
   - Metabolic emergencies – e.g. DKA/HHNK
   - Massive bleeding
   - Extensive surgeries
   - Extensive burns
   - Poisoning
   - Emerging illnesses (SARS, Avian Flu)
   - Multiple injuries

F. Nursing Diagnoses taxonomy pertinent to problems/ alteration in:
1. Cellular aberration
   a. Potential for infection
   b. Alteration in tissue perception
   c. Activity intolerance
   d. Potential for alteration in nutrition less than body requirement
   e. Alteration in oral mucous membrane integrity
   f. Alteration in comfort: pain/pruritus
   g. Fluid volume deficit

2. Acute biologic crisis/ multi-organ failure
   a. Impaired gas exchange
   b. Inability to sustain spontaneous ventilation
   c. Dysfunctional ventilatory weaning response
   d. Decreased cardiac output (CO)
   e. Altered tissue perfusion systemic
   f. Alterations in nutrition less than body requirement
   g. Fluid volume deficit
   h. Activity intolerance

G. Principles of various modalities of management
1. Health promotive
2. Disease preventive
3. Curative
4. Restorative

H. Principles of management for altered
   1. Cellular aberration
      a. Determination and management of cause
      b. Definitive management; surgery, chemotherapy, radiation therapy, biotherapy
      c. Blood component replacement
      d. O2 therapy
      e. Drug therapy
      f. Hydration
      g. Prevention of infection
      h. Supportive management
      i. Prevention of complications
      j. Rehabilitation

2. Acute biologic crisis / multi-organ failure
   a. Determination and management of cause
   b. Life saving interventions: basic life support, advanced cardiac life support, first aid measures, fluid resuscitation
   c. Life maintaining interventions: airway management and care of patients with ventilator, parenteral fluid administration including blood and blood component therapy, interventions for cardiac output problems, pharmacologic interventions for hemodynamic instability, continuous hemodynamic monitoring, interventions for neural regulation, fluid and electrolyte problems, nutrition and perioperative problems
   d. Psychosocial and behavioral interventions: measures to relieve anxiety, fear, depression, critical care concerns life: immobility, sleep deprivation, sensory overload, body image alterations, grieving, sexuality, spirituality
   e. Supportive management
   f. Prevention of complication
   g. Rehabilitation – pulmonary, cardiac, neurologic

I. Pharmacologic actions, therapeutic use, side effects, indications, contraindication, and nursing responsibilities:
   1. Cellular aberrations
      a. Anticancer agent
      b. Analgesics
      c. Narcotics
      d. Corticosteroids
      e. Antibiotics
      f. Antipruritus
      g. Analgesics, opioids
3. Acute biologic crisis/multiorgan failure
   a. Analgesics
   b. Narcotics
   c. Corticosteroids
   d. Antihypertensive
   e. Vasopressors
   f. Antibiotics
   g. Parenteral fluids

J. Purpose, indications, nursing responsibilities for the following surgical and special procedures
1. Cellular aberration
   a. Major surgical procedures: lobectomy, pneumonectomy, mastectomy, nephrectomy, prostatectomy, colectomy, colostomy, bone marrow transplant, proctectomy, colostomy, bone marrow transplant, colectomy, colostomy, bone marrow transplant
   b. Special procedure: brachytherapy, radiation therapy, Reverse isolation, chemotherapy

2. Acute biologic crisis/multiorgan failure
   a. Surgical procedure – coronary bypass, angiplasty, skin grafting,
   b. Special procedures – advanced life support, parenteral hyperalimentation, ventilatory support, fluid resuscitation, first aid measure including emergency wound and trauma management, IV therapy

K. Safe and comprehensive perioperative nursing care
   a. Assessment and care during the perioperative period
   b. Techniques in assisting the surgical team during the operation
   c. Principles of safety, comfort and privacy during the perioperative period
   d. Nursing responsibilities during the perioperative period

L. Steps/pointers in decision making and prioritization with client/s having problems in inflammatory and immunologic reaction, cellular aberration, acute biologic crisis/multiorgan failure, including emergency an disaster preparedness

M. Principles, concept and application of bioethics in the care of clients

N. Developing outcome criteria for clients with problems in inflammatory and immunologic reaction, cellular aberration, acute biologic crisis/multiorgan failure, including emergency an disaster preparedness

O. Appropriate discharge plan including health education

P. Accurate recording and documentation

III. Disaster & emergency
   A. Definition of emergency
   B. Types of emergency
   C. Triage
1. Objectives  
2. START triage  
3. Military triage  
D. Hospital emergency incident command system  
E. Incident command education  
F. Hospital operations plan  
G. Personal protective equipment  
H. Hazardous materials  
I. Decontamination  
J. Biological warfare and biological agents  
K. Blast injuries  
L. Natural disasters  
M. Stress reactions  
  - Post traumatic  
  - Stress disorder critical incident stress management  
  - Debriefing  
N. Nurses’ role in disaster and emergency  

IV. Intravenous parenteral therapy  
A. Basic foundation of IV therapy  
  - Philosophy  
  - Historical background of IV therapy  
  - Standards and competencies of IV therapy  
B. Content  
  - Review of anatomy and physiology of the vascular  
    Peripheral and integumentary system  
  - Fluid and electrolyte therapy  
  - Venipuncture technique on adult and children  
  - Complications of IV therapy  
  - Infection, control & microbiology  
  - Demonstration of procedure  
  - Documentation activity  
C. Performance scale for IV therapy  

Guide for RLE  
Provide opportunities to demonstrate procedures needed in acute biologic crisis.  
Acute Biologic Crisis: Provide opportunities for actual experience to ensure competencies in caring for clients with acute biologic crisis and those with emergency situations are developed.  
For Disaster Situations: You may provide simulated scenarios/situations for these experiences  
IV Therapy:  
  - Faculty member handling the course must have a current certificate as IV Therapist  
  - Provide opportunities for demonstration/return demonstration
Equipment and Materials [these could be found in nursing skills lab, base hospital, affiliating centers]  

Acute Biologic Crisis: Cardiac monitor, EKG machine, oxymeter, ventilatory support equipment, endotracheal tubes, tracheostomy tube, airway, BP apparatus, stethoscope, oxygen tank, O2 regulator, humidifier, monkey wrench, O2 tubings, O2 cannula/catheter, O12 masks, croupette, O2 tent, suction catheters, suction machine, cardiac arrest board, gloves, peak flow meter, tongue depressor, microscope, glass slide, one-way/two-way/three-way water seal drainage, CVP manometer and tubing, peritoneal dialysis set, dialyzing solution, hemodialysis machine (optional), incubator, Billi light, Isolette, Model for basic and advance life support, including equipment and materials for NCM 104 and NCM 105.  
IV Therapy: IV arm dummy, IV injection tray, IV needles, cotton and alcohol |

| Course Name | NURSING LEADERSHIP AND MANAGEMENT (Lecture) |
| Course Code | NCM 107-A |
| Course Description | This course deals with the concepts, principles, theories and methods of developing nursing leaders and managers in the hospital and community-based settings. It also includes ethico-moral/legal aspects of health care and nursing practice and the nurses’ responsibilities for personal and professional growth. |
| Course Credit | 4 units lecture |
| Contact Hours/sem | 72 lecture hours |
| Pre-requisite | NCM 104-Care of Clients with Problems in Inflammatory and Immunologic Response, Perception and Coordination  
NCM 105-Care of Clients with Maladaptive Patterns of Behavior |
| Co-requisite | NCM 106-Care of Clients with Problems in Cellular Aberrations, Acute Biological Crisis, Emergency and Disaster Nursing |
| Placement | 4th Year, 1st semester |
| Course Objectives | At the end of the course, the student shall be able to:  
1. Discuss principles of leadership and management  
2. Apply the principles learned in organizing and conducting a seminar |
| Course Outline | A. Management  
1. Definition/description  
2. Universal principles of management.  
3. Theories of management  
4. Management process. |

</tbody>
</table>

### B. Management functions

1. Planning
2. Organizing
   a. organizational structure
   b. staffing (selection, orientation, job description)
   c. patient classification system
   d. scheduling
   e. modalities of care
      - case method
      - primary nursing
      - team nursing
      - modular nursing
      - functional nursing
      - modified method

3. Directing/leading
   a. Leadership theories
   b. Leadership styles
   c. Leadership skills
      - Case analysis
      - Decision making
   c. Bases for power
   d. Principles of delegation
   e. Communication
   f. Motivation theories
   g. Time management
   h. Conflict management

4. Controlling
   a. budgeting
      - types of budgeting
      - costing of nursing services
   b. performance evaluation/appraisal
      - feedback
   c. staff development
   d. quality improvement /quality management
      - nursing audits & rounds
      - variance reports
      - solutions to identified problems

### C. Professional and Personal Development

1. Ethico moral aspects of nursing
   a. Code of Ethics for Nurses in the Philippines
   b. International Council of Nursing (ICN) Code of Ethics for Nurses

2. Legal Aspects of Nursing
   a. RA 9173 or The Nursing Act of 2002
b. Legal Responsibilities of Nurses

c. Other Laws Affecting Nursing Profession and the Nurse
   (e.g. Magna Carta for Public Health Workers, Labor Code, Rooming In and Breastfeeding Act, Milk Code, Senior Citizens Act, Sexual Harassment, Clean Air Act, Local Government Code, Dangerous Drugs Act, etc.)

d. Malpractice and Negligence Act

e. Contracts/Wills/Testaments

f. Legal protections in the nursing service

3. Personal/professional
   a. Positive image of a professional nurse
      ▪ Self assessment
      ▪ Self awareness

   b. Roles and responsibilities of beginning nurse practitioner
      ▪ Benner’s theory
      ▪ Nurse practitioner

   c. Career Planning
      ▪ Beginning a job search
      ▪ Sources of job leads
      ▪ Developing a resume
         - Elements
         - Types
         - Writing a cover letter
         - Developing an electronic resume
      ▪ Tracking job leads
      ▪ Dressing for a successful interview
      ▪ Answering interview questions
      ▪ Resigning from a nursing position

   d. Emerging opportunities
      ▪ Fields of specialization
      ▪ Expanded roles of nurses
      ▪ Balancing personal and professional needs

   e. Issues and trends in nursing practice/education
      [migration, aging population, complementary therapy, medical tourism, evidence-based practice, etc.]

   f. Nursing associations
      ▪ Accredited professional organization
      ▪ Interest groups
      ▪ Specialty organizations

4. Leadership in community development
   a. Application of concepts, approaches, methodologies, strategies and tools in community development discussed in NCM 100

   b. The Community as a client
      ▪ Community diagnosis—definition, types, components, phases
      ▪ Definition of health problems, nursing problems
Priority setting based on selected criteria
Strategies in people participation
Programs for basic health services (maternal and child health, family planning, medical care, environmental sanitation, communicable disease control) and the nursing components of these programs
Existing government and non-government programs
Community organization – definition, principles and mechanics
Leadership training principles and process
Specific programs and projects of DOH
Concepts and principles of networking and linkage-building
Evaluation of programs and services
Recording and reporting system (vital statistics, notifiable disease, services provided to family and community)

D. Seminars on issues and trends in nursing and health related fields

1. Planning
   a. Identify issues and trends
   b. Map out priority/relevant issues and trends
   c. Assign specific topics to the respective groups
   d. Prepare schedule for the seminars
   e. Formulate objectives for the seminar

2. Organizing/Leading
   a. Identify working committees for the seminar
   b. Define functions of each committees
   c. Assign committee members
   d. Delegate functions and responsibilities to the committee members
   e. Prepare schedule of activities

3. Controlling
   a. Prepare budget for the seminar
   b. Develop an evaluation tool
   c. Monitor implementation of the scheduled activities
   d. Post seminar evaluation

**Course Objectives**

At the end of the course and given actual situation, a group of student will be able to:

1. Undertake a final research defense process (from data gathering, analysis and interpretation of study results, dissemination of the research findings to making appropriate recommendations based on the results of their respective studies)
2. Submit a written group research study
3. Critique a research study based on stated guidelines
4. Observe ethical concepts/ principles and standards in research

**Course Outline**

A. The empirical phase
   1. Measurement and the assessment of quantitative data
      a. Definition of measurement
      b. Levels of measurement
      c. Advantages of measurement
   2. Reliability
      a. Three important aspects of reliability (stability, internal consistency and equivalence)
   3. Validity
      a. Three important aspects of validity (content validity, criterion-related validity & construct)
      b. Sensitivity and specificity

B. The Analytical phase
   1. Analyzing the quantitative and qualitative data
      a. Descriptive data analysis
      b. Inferential data analysis
      c. Classification of statistics
      d. Criteria for selecting statistical tool

C. The dissemination phase
   a. Communicating the research findings
   b. Using research in evidence-based nursing practice

D. Writing the final research report (handout on research report)
E. Critiquing of research reports
   a. Guidelines for use in critiquing reports

Course Objectives:

At the end of the course, given relevant simulated situations involving health promotion, disease prevention, health maintenance, risk reduction, curative and rehabilitative aspects of care for the mother, child and family, population group and community, the student will be able to:

1. Apply the nursing process in the care of individuals, families, population groups in selected settings.
   1.1 Assess client/s condition/health status through data derived from case scenarios (history, physical examination, interpretation of laboratory findings).
   1.2 Identify actual and at risk nursing diagnosis.
   1.3 Plan appropriate nursing interventions with client/s and family for identified nursing diagnosis.
   1.4 Implements plan of care with client/s and family
   1.5 Evaluates the progress of his/her/their client's condition and outcomes of care

2. Ensure a well organized and accurate documentation system

3. Utilize bioethical concepts/principles, core values and nursing standards in the care of clients

4. Integrate the various competencies in the various key areas of responsibilities in the care of selected clients.

Course Outline:

A. Overview
   1. Core competencies under the 11 key areas of responsibility
   2. Terminal competencies per nursing care management courses [NCM 100-104]

B. Nursing clinical scenarios integrating the nursing process, levels of care/prevention in the nursing management of the following:
   1. Healthy/at risk/sick mother and child
   2. Sick individual with alterations in oxygenation, fluid and electrolyte balance, metabolism and endocrine functioning, inflammatory and immunologic response, perception and coordination, pain including the perioperative concept,

   3. Family
   4. Population group

</tr>
<tr>
<td><strong>Placement</strong>:</td>
<td>4th year, 2nd semester</td>
</tr>
</tbody>
</table>

### Course Objectives

1. Apply the nursing process in the care of groups of clients across the lifespan with varied conditions and the community.
   - a. Assess the clients total condition and resources
   - b. Formulate nursing diagnosis based on the data gathered
   - c. Develop a plan of care for individual, family and community.
   - d. Implement plan of care applying appropriate interventions
   - e. Evaluate outcome of care.

2. Demonstrate competencies of a beginning staff nurse, head nurse, researcher and leader.

3. Observe bioethical principles, core values, and standards of nursing care.

4. Organize seminars on issues and trends in nursing and health-related fields.

5. Promotes personal and professional growth.
## Course Outline

| I. Assignment in the clinical areas: |
| 1. Staff Nurse experience in the ward |
|   • Case Method |
|   • Primary Nursing |
| 2. Public Health Nurse experience in the Rural Health Unit/Health Centers and Community based Practicum |
|   • Case load Management |
|   • Participatory approach to developing community competence |

| II. Focus of Clinical Experience |
| A. Nursing process applied in the care of individual, groups of clients, families and community: Case Load Management, Conducting Health Programs/Services, Developing Community Competence |
| B. Primary nursing elements |
| C. Standards of care |
| D. Interpersonal and managerial concepts and strategies. |
|   1. Unit management |
|   2. Staff development |
| E. Evidence-based practice |

| III. Conduct: |
| 1. Case presentations |
| 2. Seminar on trends in patient care |

## Guide for RLE

Planning for the RLE of INP and NCM 107 shall be done simultaneously within the semester to be reflected in one clinical rotation.

Provide opportunities for actual hospital experiences applying the primary nursing and the case method of assignment to ensure competencies are developed.

Provide opportunities for actual experiences with community as a client.
Nursing Electives: Students shall choose at least two Electives [Elective I and Elective II] to Complete the BS Nursing Program.

Elective I is taken in the 3rd Year 2nd Semester. Choices for Elective I are as follows:
1. Parent-Child Nursing
2. Spiritual Care Nursing
3. Hospice Palliative Care

Elective II is taken in the 4th Year, 1st Semester. Choices for Elective II are as follows:
1. Acute/Critical Care Nursing
2. Quality Health Care and Nursing
3. Care of the Chronically ill and the Older Person

<table>
<thead>

</table>
| Objectives   | At the end of the course, given actual scenarios/situations, the student will be able to:
   1. Explain the developmental tasks of the family as a unit and of parents;
   2. Discuss strategies to address marital relationship problems based on relevant laws; and
   3. Discuss strategies to address parent-child relationship problems that are age-appropriate and based on relevant laws. |
| Outline      | 1. The Family as a unit
   • family developmental tasks
   2. Choosing a partner
   • factors influencing the choice of a spouse
   • dating and courtship
   3. Roles of Married couples
   4. Ways of maintaining love and respect between husband and wife
   • marital relationship
   • sexual adjustments
   • power, decision-making and communication
   5. Special problems in marital relationships
   • non-marital relationship/live-in partnership
   • marital infidelity
   • domestic violence
   6. Law affecting marital relationship |
7. The Parents
   - Developmental tasks of parents-to-be: mothering and fathering
   - Mercer’s theory and Rubin’s theory
   - Behavior and needs of expectant mothers
   - Mothering role
   - Fathering role
   - Selected situational crises affecting parental assumption of their role:
     a. single parenthood
     b. birth of handicapped child
     c. adopting a child
     d. separation/divorce
     e. hospitalization/death of a spouse
     f. working mother/absentee parent(s)
8. Effects of childless marriage
9. Child Abuse including laws protecting children:
   - RA 8043 An Act Regulating Inter-country Adoption,
   - RA 8552 An Act Regulating Domestic Adoption
   - RA 9231 Special Protection of Children Against child abuse, exploitation and discrimination
   - RA 9262 An Act Defining Violence Against women and their children providing for protective measures for victims
10. Parenting an Infant
    - Common behavioral problems of infants
    - Role of the nurse in the care of a family with healthy/ill infant
11. Parenting a Toddler
    - common behavioral problems
      a. bed wetting
      b. thumb sucking
      c. temper tantrums
    - accident prevention
    - role of the nurse in the care of a family with healthy/ill toddler
12. Parenting a Preschooler
    - Preparing the child for school
    - Sex awareness/sex education
    - Common behavioral problems
      a. sibling rivalry
      b. middle child complex
      - role of the nurse in the care of a family with a healthy/ill preschool child
13. Parenting a Schooler
    - Common behavioral problems
      a. under achievement
      b. attention deficit hyperactivity syndrome
      - role of the nurse in the care of a family with healthy/ill schooler
<table>

</tbody>
</table>

**Course Objectives:**
Given relevant situations/conditions, the student will be able to:

1. Apply principles, theories and strategies of spiritual care in understanding the spiritual needs of the clients.
2. Demonstrate traits and characteristics that reflects the holistic development of a nurse.

**Course Outline**
1. History of Spiritual Care in Nursing
   1.1 Pre-Christian Era
   1.2 Christian Era
   1.3 Post-Reformation Era
2. The Nature of Spirituality
3. The Spiritual Need
   Distinction between Spiritual Needs and Psychosocial Needs
   3.2 Clarifying Spiritual Needs in Terms of Three Dimensions
      3.2.1 Physical or Biological Dimension
      3.2.2 Psychosocial Dimensions
      3.2.3 Spiritual Dimensions
4. How Nursing Today View Spiritual Care
   5.1 For a long time, spiritual care was frankly Religious functions and Intervention limited (at least officially) to calling the hospital chaplain
   5.2 1960-1970 - a growing interest in the spiritual, psychosocial and Emotional aspects of nursing care
   4.3 1971 - The nurse ministering to the whole person
   4.4 Spiritual Care- a natural part of total care which fits easily into the nursing process (e.g Spiritual Assessment and care)
5. Concepts, theories and applications in the care of the human Spirit
   5.1 Virginia Henderson
   5.2 Faye Abdellah
   5.3 Joyce Travelbee
5.4 Betty Newman  
5.5 Parse, Peterson and Zderad  
5.6 Jean Watson  

6. Ethics in Spiritual Care Nursing  
7. The Nurse’s Role in Spiritual Care  
7.1 Nurse’s Spirituality  
Understanding own and the degree to which one’s spiritual needs are being met  
Resolving one’s spiritual concerns and distress  
7.2 Recognizing the nurse’s own limitations  
7.3 Mobilising the patient’s spiritual resources and patients’ expressed needs  
7.4 Developing a relationship of trust between the nurse and the patient  
7.5 Awareness and respect of the patient’s culture, social and spiritual preferences  
7.6 Referral or utilise members of the team is as important for spiritual care as it is for other aspects of care  
7.7 Documenting spiritual care  

8. Patient’s Needing Spiritual care  
8.1 Patient with acute illness  
8.2 Chronically Ill Patient  
8.3 Children and Families  
8.4 Older Adult  
8.5 Dying and Bereavement  
8.6 During disasters  
8.7 During emergencies  

9. Personal Spiritual Development: Theological Reflection  

10. Meeting the Challenge  
10.1 The therapeutic use of the self in meeting the needs of the human spirit:  
The need for love and relatedness, meaning and purpose and hope  
10.2 Attending on going education courses and workshops dealing with spiritual care in nursing, reading relevant literatures, interacting with colleagues, liaising with hospital chaplains

</table>
near death situation, the student will be able to:

1. Differentiate the stages of death and dying.
2. Assess the needs of client and family members/carers
3. Identify and prioritize the appropriate nursing intervention of the client/family/carer at any stage of the life situation.
4. Implement with client/family/carer the most relevant intervention at present time taking into consideration the principles and techniques of desired actions.
5. Follow with respect the bioethical and cultural beliefs and practices of the client/family/carer
6. Relate effectively with clients/family/carer and members of the health team and others to fulfill the quality of life.

Course Outline:

B. Principles of Palliative Care:
   1. Affirms life and regards dying as a normal process
   2. Neither hastens nor postpones death
   3. Provides relief from pain and other distressing symptoms
   4. Integrates the psychological, ethical, legal, and spiritual aspects of care
   5. Offers a support system to help patients live as actively as possible until death
   6. Offers a support system to help patient's families cope during the patient’s illness and in their own bereavement

II. Essential Components of Palliative Care
   1. Symptom control
   2. Effective communication
   3. Rehabilitation
   4. Continuity of care
   5. Terminal care
   6. Support in bereavement
   7. Education
   8. Research

I. Nurses Role
   a. Providing direct care
   b. Advocate
   c. Counselor
   d. Collaborative Role

II. Issues and Trends in Hospice Palliative Care

**Course Name**: QUALITY HEALTH CARE AND NURSING  
**Course Code**: Elec II  
**Course Description**: This course deals with the concepts, principles and dimensions of quality health care, quality standards for Health Provider Organizations and implementing a Performance Improvement/management program in the health care system.  
**Course Credit**: 2 units lecture  
**Contact Hours/Sem.**: 36 lecture hours  
**Prerequisite**:  
**Course Objective**: At the end of the course, and given actual health care management and clinical case scenario, the student will be able to:  
1. Implement the PhilHealth Quality Standards.  
2. Apply Performance Improvement Program utilizing the rationale and steps for performance improvement and TQM.  
4. Select/use appropriately Quality Improvement Tools.

| Objectives    | At the end of the course, given scenarios/situations, the student should be able to:  
  1. Utilize the nursing process in the care of patients with chronic illness and care of the older person  
  2. Discuss special concerns, issues and trends in caring for the chronically ill and the older person |
| Course Outline| III. Chronic Illness  
  A. Key Problem Areas Experienced By Patients With Chronic Illness  
  B. Review of the Pathophysiology of selected chronic conditions: Heart Disease, Hypertension, Chronic Obstructive Pulmonary Disease, Diabetes, Cancer, Dementia, Stroke  
  C. Specific assessment focus and management of the above conditions  
  D. Health Education in Chronic Illness  
  E. Behavioral Management in chronic illness –  
     • Coping interventions for powerlessness, hopelessness, sensory deprivation, sleeplessness etc.  
     • Social Support System and family in Chronic Illness  
  F. Issues and Trends in Chronic Care |
IV. Care of the Older Persons
   A. Factors that affect normal functioning of the older persons
      • Demographics of Aging
      • Theories of Aging
      • Socioeconomic Aspects of Aging
      • The Aging Family The Well Older Person Changes in the Older person and their Implications to Care
         Physical/ Physiological/Biological
         Social and Psychological Emotional
   B. Cultural factors/ethnicity such as regard for elders, perception of health
   C. Risk factors associated with chronic illness
   D. Patterns of Illness of the older persons
   E. Comprehensive geriatric assessment
   F. Nursing Diagnosis related to Wellness, & chronic illness
   G. Problems related to the older persons
      • Physiologic functioning
      • Behavioral
      • Safety
   H. Needs for Self-care, life support, health maintenance
   I. Health problems in chronic illness
   J. Levels of care
   K. Principles in the care of the older persons
      • Wellness
      • Health promotion
      • Chronic illness
      • Recovery and rehabilitation
      • Quality of Life
   L. Nursing Interventions for specific problems of the older persons include care that support:
      • Wellness
         Nutrition support
         Activity and exercise
         Stress management
      • Physiologic functioning
         Activity & exercise
         Nutrition support
         Respiratory management
         Tissue perfusion management
         Electrolyte and acid-base balance management
         Skin/wound management
         Physical comfort promotion
      • Behavioral
         Coping assistance
         Patient education
         Spiritual care

GUIDELINES FOR IMPLEMENTING RELATED LEARNING EXPERIENCES

The Bachelor of Science in Nursing (BSN) curriculum is a competency-based and community-oriented curriculum. The teaching-learning process is composed of the theoretical/didactic and experiential/RLE. The Related Learning Experiences (RLEs) is composed of Clinicals and Skills Laboratory. The RLE activities are carefully selected to develop competencies utilizing the nursing process in varying health situations.

Hence, the challenges depend greatly in the preparedness and ability of the faculty to organize the learning experiences in the classroom or various health situations based on the clearly-defined objectives.

The RLE is viewed in terms of changes in the behavior of the students and not just in terms of content. The faculty must be competent in selecting RLE that will provide for continuity, sequence and integration of principles, concepts, skills and values that have been previously learned in the classroom and other situations.

In coming up with the proposed formula for determining cost of RLE per student, considerations were given to (a) Rules and Standards of Nursing Education and the prescribed units and hours for the RLE in the BSN Curriculum, (b) faculty preparation, and competence. The following should be considered:

1. A class is composed of 48-50 students.
   Faculty-student Ratio for RLE (clinical in hospital/community setting) per semester and year level shall be:
   
   - 2\textsuperscript{nd} Year level 1:8 students to a group (1\textsuperscript{st} Semester)
   - 1:8 students to a group (2\textsuperscript{nd} Semester)
   - 3\textsuperscript{rd} Year level 1:10-12 students to a group (1\textsuperscript{st} Semester)
   - 1:10-12 students to a group (2\textsuperscript{nd} Semester)
   - 4\textsuperscript{th} Year level 1:12-15 students to a group (1\textsuperscript{st} Semester)
   - 1:12-15 students to a group (2\textsuperscript{nd} Semester)

2. Related Learning Experiences hours required for the whole program . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . .... 2, 346 hours

</tbody>
</table>

4. **Basis for Computation to Determine RLE Fee:**

   Number of hours assigned to faculty X hourly rate = RLE Fee
   Hourly rate shall be specified in the Guidelines for Affiliation
   promulgated by the Department of Health

5. **Computation of RLE Hours:** 1 unit = 51 hours
